

Our Ethical Commitment

“Destiny-Gram: AI Mentoring with Integrity”

At Destiny-Gram, we believe that artificial intelligence should empower individuals—not exploit them. As we pioneer AI-assisted mentoring, we are committed to building a platform that respects personal agency, protects data sovereignty, and promotes ethical innovation.

Founder’s Dual Engagement (with Academia and AI-safety institutions)

- **“Entrepreneur in Residence”**, supporting student ventures and responsible tech leadership.
- **“Strategic Collaborator”**, contributing to research on ethical AI and data governance.

Destiny-Gram does not claim endorsement from the institution with which it collaborates but shares their values and actively contributes to their missions.

What We Stand For

- **Transparency:** We clearly communicate our affiliations, intentions, and data practices.
- **Ethical Design:** Our algorithms are built to support—not replace—human judgment, with safeguards against bias and manipulation.
- **Data Sovereignty:** Users own their data. We prioritize consent, control, and clarity in every interaction.
- **Public Benefit:** We aim to serve educators, students, and communities—not just shareholders.

Our long-term vision includes hybrid models that reinforce our social mission.

Collaboration with Integrity

We welcome partnerships with academic and policy institutions that share our commitment to responsible AI. All collaborations are structured to ensure mutual value, clear boundaries, and public accountability.
