

## PRODUCT INFORMATION

# HIMI OIL TRANS4MER™

As cars age, they start to lose power and no longer deliver optimum performance. In fact, the oil may begin to break down faster. The seals can deteriorate, oil consumption grows, and gaskets become brittle.

By today's standards, a vehicle is considered high mileage when it reaches 75,000 miles. Vehicles on the road today have an average age of 11.4 years. This means it's time for a little extra TLC.

## BENEFITS

NGEN High Mileage Oil Trans4mer™ will keep your vehicle performing better, longer. It increases compression, quiets noisy engines, and stops leaks and smoking. No need to stock multiple weights and brands of oils to satisfy the needs of your customers.

*One pour does more!™*

## DIRECTIONS

Add to warm crankcase during oil change. One bottle treats 3 to 6 quarts. We recommend two bottles for badly worn engines and diesels. Do NOT overfill.
