

Valentus is excited to announce the launch of our newest product innovation to join our Prevail© line of functional beverages, our ever popular **SlimROAST™ Healthy Weight Management Coffee**. A new favorite among coffee drinkers, Valentus' Brazilian Dark Roast Coffee is infused with functional ingredients* that make up our *proprietary formula* that tastes amazing!

Garcinia Cambogia

An incredibly efficient fat-reducing ingredient, Garcinia Cambogia has received much media attention for its effect on weight loss and food consumption control. This pure ingredient is 100% natural; it is sometimes referred to as Tamarind, and it grows primarily in the lush green mountains of India, Southeast Asia as well as in Central Africa. Its primary active ingredient is HCA (Hydroxycitric Acid), which is proven in scientific studies to stop hunger in its tracks. HCA also prevents the body from making new fat, allowing for the more efficient burning of existing fat. The tamarind fruit has traditionally been used in soups and appetizers before meals in places where food is scarce or too expensive. It's appetite suppression qualities help make villagers feel more full (satiety) and the fruit increases the workers' fat burning ability (thermogenesis) providing an increase in energy and productivity.

Phaseolamin

This ingredient combines with an enzyme in the body called alpha-amylase – which is involved in the digestion of starch – this helps to temporarily block its activities. Alpha-amylase is secreted in saliva as well as the small intestines, and is produced in the pancreas. It is responsible for breaking down starch into simple sugars, which can then be absorbed in the small intestine. Phaseolamin works by blocking this digestive enzyme, preventing the digestion of carbohydrates, which means they are able to pass largely undigested through the gastrointestinal tract. The end result is a decrease in the number of calories absorbed, thereby helping to promote weight loss.

Green Tea

Green tea contains 2% to 4% caffeine, which affects thinking and alertness, increases urine output, and may improve the function of brain messengers. Caffeine is thought to stimulate the nervous system, heart, and muscles by increasing the release of certain chemicals in the brain called neurotransmitters. Antioxidants and other substances in green tea have been shown in studies to help protect the heart and blood vessels additionally. In addition, green tea contains a powerful antioxidant and polyphenol known as EGCG, which is being studied for numerous health benefits.

Chlorogenic Acid

This natural chemical compound is found primarily in green coffee beans; it holds promise in many aspects of health and cognition similar to bioflavonoids and shares some effects similar to caffeine, but less potent. Studies show that Chlorogenic Acid may also decrease the absorption of dietary carbohydrate, as well as provide anti-oxidant and anti-inflammatory benefits.

Dark Brazilian Roast Coffee

It is also known as the "coffee shrub of Arabia", "mountain coffee" or "Arabica coffee". Arabica coffee is believed to be the first species of coffee to be cultivated. The earliest credible evidence of either coffee drinking or knowledge of the coffee tree appears in the mid-15th century, in the Sufi Muslim monasteries around Mocha in Yemen. Arabica coffee production in Indonesia began in 1699.

High-quality Arabica is beautifully fragrant, sweet and round, with a slight and pleasant acidity, with just a mild hint of bitterness.

L-Theanine

Theanine is an amino acid found in green tea, and is probably the reason why drinking green tea help in weight loss. Studies have found that weight gain is prevalent in people who are emotionally stressed. This is a biological response of our metabolism and leads to cravings and overconsumption of food. When stressed, we produce increasing amounts of a hormone called cortisol. This is a natural response that is intended to help in survival, which as a consequence also leads to increased fat storage. Theanine neutralizes stress, by reducing anxiety and improving the quality of sleep. It does this by increasing the alpha waves in your brain, which relaxes the mind.

With these problems removed now your body:

- Won't store all the fat you eat
- won't resist weight loss
- won't give you increased feelings of hunger

Phenylethylamine HCL

Also known as PEA, Beta-Phenylethylamine or 2-Phenylethylamine, is a supplement used for different purposes, among them cognitive enhancement, mood improvement, weight loss, and as a concentration aid.

It naturally occurs within the nervous systems of humans and other mammals, where it is thought to act as a type of neuromodulator. Within the human brain it causes the release of norepinephrine and dopamine, two very powerful brain chemicals involved in attention and alertness.

PEA is contained in chocolate and has been affectionately referred to as the 'love drug,' since it is released by our brains when we have feelings of romantic love. This is also what helps us to feel more alert and have a greater sense of well-being and contentment.

Cacao

Organic, raw cacao is a superfood containing a variety of unique phytonutrients, including high amounts of sulfur, magnesium and phenylethylamine. These characteristics provide many benefits, such as focus and alertness, while also keeping you in a great mood. These properties help in the reduction of stress and also increase the sensation of fullness, reducing hunger and cravings. Cacao contains MAO (monoamine oxidase enzyme inhibitor) which is able to reduce appetite by increasing serotonin and other neurotransmitters in the brain that help to decrease appetite and hunger.
