Dear Theory 1 Students,

Thank you to all of you who have emailed me your assignments from last week. It was also just nice to hear from you. I miss you!

This week we will be talking more about intervals. As mentioned before an interval is measured in distance and quality. Today's assignment will be figuring out the distance between notes. For instance from C to E is a third. If you start on C and count up C-D-E that is three notes, thus a THIRD.

If you start on D and count up to A it would be D-E-F-G-A or five notes, what we refer to as a FIFTH.

Please remember to use your fingers when counting including both the beginning and the ending notes.

I have attached a worksheet to provide practice counting notes. Good luck!

Second year students, you are welcome to also include the quality of the interval: Major, Minor, Augmented, Diminished, etc.

The second worksheet is a review of terms and symbols. You are welcome to compare your answers with your music dictionary, but try to memorize them as you go.

I can't wait to see you...take care...stay well!
