*Since Mar 2020

US ECONOMIC GROWTH CONTINUES TO BE OVERSTATED BY LEVEL OF GOVERNMENT SPENDING

The Commerce Department reported the US economy grew slightly slower in the third quarter amid easing inflation and stronger consumer spending. It's Bureau of Economic Analysis found the US economy grew at an annual rate of 2.8% in the third quarter, between July through September.

But before anyone starts to turn cartwheels, the report also noted that the pace of government spending increased more than 5.0% with federal spending rising 8.9% and state spending increasing 2.7%.

It was the ninth consecutive quarter that the pace of government spending exceeding that of consumer spending and marked the widest difference between the two over that period of time.

Consumer spending generally accounts for two-thirds - a measure that balances core growth sustainability against potential economic vulnerability. Since the third quarter of 2021, the pace of quarterly government spending has averaged 4.0% versus consumer spending's 2.4%. This has overstated average quarterly growth at 2.8%.

For all the monetarists in the room, this has been a principle contributor to the elevated inflation environment - noting that it has occurred in a post-COVID period of time.

STRATEGICALLY FOR CREDIT UNIONS

The impact that government spending has had on the final GDP metric is remarkable. It is estimated that since 2021, the actual pace of economic growth has been closer to 1.1% - versus the stated 2.8%.

In 2023, while growth was reported to be 3.2%, it is our estimate that real growth was closer to 1.6%. More remarkable is the impact that it has had on 2024 metrics. The government cites an average growth pace of 2.4% when we estimate, actual core growth is closer to 0.9%.

Recall that GDP is the value of goods and services produced by the economic - something that the hyper-inflationary environment as similarly elevated. The reason this is important is that it puts a completely different perspective on core economic strength and challenges Federal Reserve policy-makers even greater than hat they have been facing.

There is so much "noise" in the metrics that have been released that the government is sending mixed signals. The employment sector looks to be functioning with low unemployment but most of the job growth has come from part-time, relatively low paying positions. Some are saying that inflation is falling when in reality its the pace of inflation that is slowing - prices remain 24% higher than only 3 years ago.

This sets up significant challenges for the new Administration and Congress to upright the wobbling economic gyroscope.
