

Injection Valves

Refurbishment

REFURBISHMENT SERVICE:

Injection Valve

Services performed:

- Incoming inspection & Failure Determination
- Complete Tear down and Initial Cleaning
- Passivation of Stainless Steel Components
- Inspection of Teflon surface
- Low Temp Sensor modification
- Testing and validation against factory specification
- Function Tested at "like process" flow rates
- Final cleaning and Helium Leak Test
- Packaged in Cleanroom environment
- Includes accompanying Test Report
- Chamber ready Quality Assurance

Our team of industry professionals are considered leaders in precision pressure and flow devices within the semiconductor industry. Our services are performed in clean environment with procedures that meet or exceed the most stringent OEM and industry specifications. We provide exceptional value, quick turn around times, and customizable testing procedures.
