

## Have You Noticed?

Have you noticed that the Bible's rendition of Creation does not change? The record begins with a major premise, i.e., "In the beginning God created..." does not "threaten," or attempt to "rewrite history."

The "Have You Noticed" is a question regarding an article about human origin. On the one hand, it has been affirmed, "The Out of Africa theory is the most widely accepted explanation for the origins of modern humans. It states that all humans originated in Africa and subsequently migrated out of the continent over time. This theory is supported by genetic studies, fossil records, and archaeological finds" ([History skills](#)). But wait, not so fast: "The 'Out of Africa' theory, which posits that modern humans originated in Africa and later migrated to other continents, is facing challenges from new evidence and theories. Dr. Huan Shi's 'out of East Asia' theory suggests that evolution began in East Asia, where fossils predating the Africa timeline have been found" ([Daily Mail](#)).

How about "The Origin of the Universe"?

"The origin of the universe has been reevaluated through scientific discovery and philosophical inquiry. The Big Bang Theory, proposed by Georges Lemaître in the 1920s, suggests that the universe began from a single primordial atom and has since expanded and cooled, leading to the formation of galaxies, stars, and planets. This theory has been supported by observations of the expansion of the universe and the detection of cosmic microwave radiation, which is interpreted as the echo of the Big Bang. The theory of inflation, which describes the rapid expansion of the universe, has also been proposed to explain the uniform temperature and distribution of matter. As we continue to explore the cosmos, we may find new insights that challenge or refine our understanding of the universe's origins" ([Reevaluated](#)).

How about "Human Origins"?

"Six recent discoveries that have changed how we think about human origins" ([The Conversation](#)).

The short and skinny: If you are perusing the internet headlines, the question will not be, "Have You Noticed," but rather a statement, "Just another theory that 'is supported by genetic studies'," "is facing challenges from new evidence and theories" (Ibid).

By the way, we did not neglect to mention "that the Bible's rendition of Creation does not change." ret
