T-SPEEDSTER KIT

The T-Speedster Kit will enable you to make a speedster of classic design and elegance, a speedster that will provide hours of enjoyment as well as being an excellent investment. The T-Speedster Kit is easy to assemble for even a beginner.

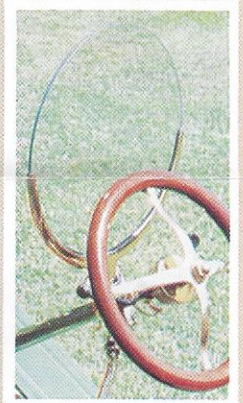

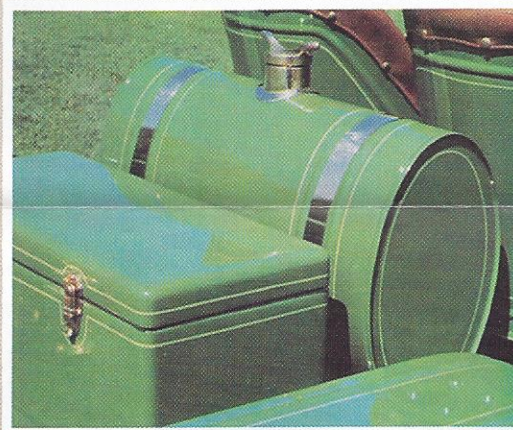

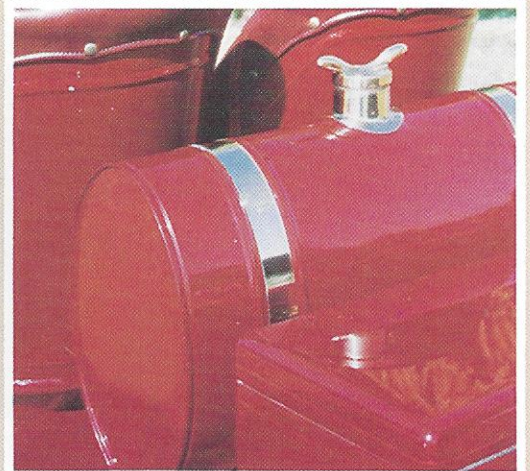

All you need to build a speedster is your own Model T chassis and running gear, plus finishing touches. The T-Speedster Kit supplies the rest.

Choose from the many designs available. If you prefer a standard type speedster, use a stock chassis with the T-Speedster Body Kit plus an early T stock fenders, splash apron and running board; this results in a speedster of pleasing design and proportions.

A torpedo style hood with louvers provides a longer look and more cooling activity. Use either the monacle windshields, as shown, or a stock T windshield with a straight top firewall.

Or you may prefer the dropped axle and lowered rear cross-member. Choose either the curved top or flat top special speedster fender with a free floating skirt for a low, racy look.

Your own creativity will add the distinctive touches. Call or write Rootlieb, Inc. today for the parts you need or for further information on building your own speedster.
