

# Strategy

- Least risky procedure with greatest long-term benefit

# Off Pump Procedure

- Off Pump Coronary Artery Bypass (OPCAB) LIMA-LAD + RIMA-RCA

# Hybrid Revascularization

- Combine surgical and interventional approaches to facilitate minimally invasive surgery
  - Transform a high-risk operation into 2 less risky procedures
  - Potentially decrease risk of surgery in elderly and high-risk patients

# Hybrid Revascularization

- Goal
  - Improved patient comfort
  - Decreased cost
  - Optimized approach with non-inferior outcomes
  - Decreased LOS decreased morbidity

# Hybrid Procedure Criteria

- Non-LAD coronary lesion, or not amenable to internal mammary bypass grafting
  - PCI that is technically feasible and durable
  - Ability to tolerate the required antiplatelet and anticoagulation regimens
-
