

Natural Reference Sires (2018 Breeding Season)

Cedarflo All In 836 Reg#18594383

- When he was born, I knew we would save him for use as a natural sire. His dam is a moderate framed Regis 904 daughter, who puts a lot of style and function into her progeny. All In 2138 produces offspring with a light birthweight that grow exponentially. This sire is straight, smooth, long and well muscled. His calves should be attractive as proven by Lot #s 3A, 35A, 53A, 57A, & 136

MAR 4097 Aberdeen 2194 Reg#17921722

- This RWA 2194 bull was our selection from Maher's 2015 sale. He was selected for his outcross pedigree. His progeny will display a touch more frame and length that is offset by his calving ease numbers. He was probably one of the most fertile bulls we've ever had. Give him all the late calvers and he would have them in the first cycle the next year. He proved this time and again. Hopefully some of that fertility rubs off to the next generations. My favorite progeny from him are Lot #'s 18, 22, 92, 110A & 147

Ridl Aviator 790 Reg#18851640

- 790 was a bull I didn't go looking for but fell in love with on site. His sire is known for a smaller frame, exceptional muscle expression and calving ease. All were present in this animal. 790 had a depth, thickness and athleticism that I felt his contemporaries couldn't touch.

MAR Sonic 719 Reg#18990857

- DL Sonic 444, this bull's sire, is known for having an exceptional BW to WW spread. Knowing that, and wanting that particular influence, led me to this animal. He was smooth shouldered, with muscle packed in the rear end. Expect progeny that come out easy and grow with a touch more leg under them.

Cedarflo Comrade 387 Reg#18953271

- This bull was the definition of a Cedarflo animal. He started with an exceptional temperament, couple that with a small/moderate frame with all the bullish masculinity from his All In mother. He got himself hurt the day before our sale this last spring, I didn't hesitate to keep him and use him on heifers and in relief as needed. I hope his offspring are as charming and attractive as he was.

Cedarflo Comrade 977 Reg#18953294

- I saved him to us as a clean-up bull on our heifers. He was replaced by 387 in that lineup but was used later to finish off the bred heifers. He displayed all the moderate framed qualities of his sire.

Natural Reference Sires (2017)

Connealy Advance 3371 Reg#18230742

- Tattoo #5133, I purchased him from the Connealy spring sale 2016. He had a moderate BW with a WW Ratio of 110 out of 120 contemporaries. His sire is known for making very stylish animals and their catalog listed his mother as an attractive, larger framed Heat daughter. A large Ribeye accentuated his profile. The proof of his progeny are displayed in Lot#'s 3B, 55A, 56A, 131 and 133

Cedarflo Excitement 45 Reg#18291842

- This bull gets his punch from his Mandate dam. Long and thick, he worked well as a cleanup bull. His progeny show a feminine side, displaying what his dam was capable of. Progeny of his made the top pen at last years bull sale due to their thick, muscled rear end and length of body. Check out Lot #'s 1307 and 757.

Barstow Unanimous D23 Reg# 18645591

- An easy keeping, Unanimous son out of an Upward daughter. I purchased him from Barstow Angus in the spring of 2017. Progeny should display good feet and structure, as did he. Exceptional progeny in the sale are Lot #'s 32A and 109A

Connealy 12E7 043X Reg#17892694

- Dad fell in love with him at Connealy's 2015 spring sale. He bought him off the top end of the sale. Structurally correct and well muscled, with excellent feet. A large ribeye highlights his carcass package. He was a bull that looked like a bull. Progeny are moderate framed with a ton of eye appeal. I think his daughters are going to do fantastic things for someone. Look at Lot#'s 15, 16 and 17.

Cedarflo Comrade 635 Reg#18294769

- We saved him to clean up our heifers in 2016. Satisfied with the results, I used him again in 2017. Progeny are smooth shouldered with a nice eye appeal. Most of them should be as productive as their sire in producing a square calf that comes out easy and doesn't lag behind. Check out Lot #'s 46A, 92A, 96A and 97A.
