Top-end yield potential

Great grain quality

Superior plant health

Very widely adapted across the Corn Belt wherever the maturity is appropriate, LG66C44 can be planted early or late. It performs best at moderate to higher populations with limited concerns about tillage or soil types. In-season fertility maximizes grain yield and it will respond to high yield management practices.

Growing Degree Days (GDD)

Pollen: 1355 Silk: 1358 Black Layer: 2876

Plant Rate Flexibility

28 - 38,000 Plants per Acre

CHARACTERISTICS

Early Vigor	●●●●●●●●
Greensnap	●●●●●●●●
Drydown	●●●●●●●●
Staygreen	●●●●●●●●
Drought Tolerance	●●●●●●●●
Test Weight	●●●●●●●●
Harvest Appearance	●●●●●●●●

MANAGEMENT

Low Populations	●●●●●●●●
Med Populations	●●●●●●●●
High Populations	●●●●●●●●
Marginal Soil	●●●●●●●●
Productive Soil	●●●●●●●●
Continuous Corn	●●●●●●●●
Adapt to No-Till	●●●●●●●●

DISEASE TOLERANCE

N Leaf Blight	●●●●●●●●
S Leaf Blight	●●●●●●●●
Gray Leaf Spot	●●●●●●●●
Goss's Bacterial Wilt	●●●●●●●●
Anthraxnose	●●●●●●●●
Southern Rust	●●●●●●●●
Fungicide Response	High
Tar Spot	Moderately Tolerant
