

An Ideal Society In Another Creation: Ptaah's Discovery

In the early 2000's, perhaps even in the late 1990's the Plejaren were working on a technology that would enable them to begin to explore Creations outside of our own twin Creations.

Through means to be revealed later, the Plejaren were able to determine that, adjacent to our twin Creations, exists a Creation termed a Central Creation. A Central Creation is further advanced in its evolution and no longer has a material belt.

However, they also somehow knew that beyond that Central Creation there exists another universe/Creation, that is also a primary Creation and thus has material worlds, etc.

As we know, only a Creation in the first stage of evolution has a material belt.

Sometime between August and December of 2002 the Plejaren had progressed to the point where it was safe for Ptaah to safely set out with his Great Spacer and a large crew to explore that other first level Creation.

Ptaah

The Great Spacer

Following is a chronological collection of excerpts from 7 Contact Reports that Billy had with Florena, Zafenatpaneach, Enjana, Quetzal and Ptaah, to do with the progress of the expedition. The Contacts span from December of 2002 into July of 2004.

#1) 2002 Dec 16 BLK 8 CR 331 Florena reports on Ptaah's exploration of the other Universe

Florena: For my part, I am to send from Ptaah to you and all group members that he sends his greetings to everyone and that he and all his companions are well and that no problems have arisen.

Meanwhile he has penetrated into the material part of the universe, as I told you earlier, they have not yet found any life-forms of any higher kind.

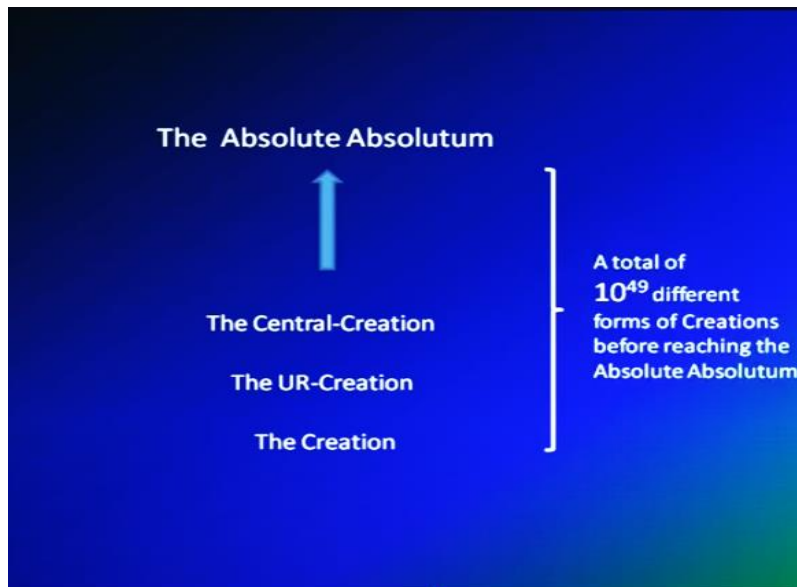

Discoveries of life-forms are limited so far only to micro-organisms. Furthermore, it is a first universe resp. universe of the Creation, like our DERN-universe.

Billy: However, you stand in an ongoing connection with Ptaah, right?

F: That is the case, yes.

Billy: And the universe adjacent to our DERN-universe, what form is that – could that already be fathomed? A channel had to be created through it, which is probably called a wormhole here. In any case, it must be something that falls within this framework.

F: The adjacent universe, which we have not yet named, as well as the one where Ptaah is not located, is a higher universe, a Central universe, which we cannot travel to.

A Central Creation/ Universe is Two levels above a primary Creation.

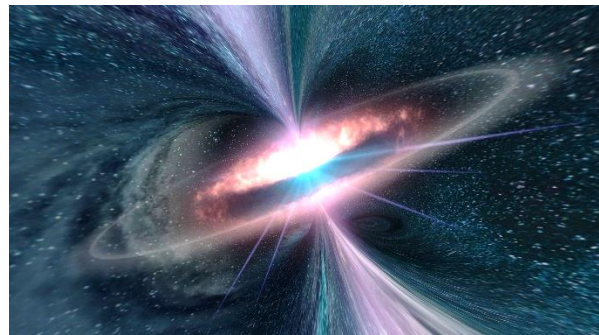

Screen grab from [‘The Evolution of the Creation’](#) video by and courtesy of M. Uyttebroek

Florena: Since it [the Central Creation] is dimensioned differently in its evolution than our DERN-universe and its dimensions, we are only able to create an energy tunnel through it in order to reach the other side of the universe where Ptaah is located. So, what you call channel, we call energy tunnel.

Billy: Ptaah is over there with his Great Spacer – and it must take enormous masses of energy to create this tunnel and maintain it – and how do you create this energy?

F: That is correct. Ptaah is in the foreign universe with his Great-Spacer flying device. The energy for the creation of the energy tunnel and its maintenance we get from a 'black hole', as you call it. Other sources would be far too small in every respect to generate the necessary energies.

Billy: Could you make a comparison?

F: I am not familiar with this field, but I know that the energies needed per second include several times the mass of energy, as you call it, that a sun like the one in your system releases in one second.

Billy: As a layman in physics, I am afraid this is a closed book. But it gives me the notion that an enormous mass of energy is needed, which we on Earth are probably not yet capable of producing by any means, right?

F: That is absolutely correct. Such enormous energies cannot be created by pure technical means, as they are available to terrestrial human beings or even to us. In fact, gigantic cosmic objects are required for this purpose, which must also be inexhaustible in their energy supply, as is the case only with a 'black hole'.

Billy: Can any kind of 'black hole' be used for this purpose, i.e. a stationary or a moving one?

F: In principle the energies can be used by any kind, but for the specific purpose of the energy tunnel only the energies of a stationary 'black hole' can be used.

In the case of our energy tunnel, however, we do not use a simple 'black hole' to generate energy, but a twin structure, by which I mean two similar 'black holes' that are close to each other and allow their energies to flow into each other.

Billy: Interesting; I have never heard of that. How far apart are such 'twin black holes' from each other that they can still interact with their energies and still not 'eat' each other and therefore not merge, if I may put it like that?

F: Your description is good, as is your assumption that a certain distance between the objects is necessary, which results from their power. To be calculated are the distances in a larger number of light-years. The gravitational forces of the 'black holes' alone extend over hundreds, thousands or even millions of light-years, depending on their size. The type of black hole is also important.

Billy: I understand; there are different kinds of 'black holes', whereby different modes of activities also appear, as Quetzal once explained to me.

F: That is correct.

Billy: Since nothing of importance has yet emerged in the foreign universe, there is probably no point in discussing it further. So let's leave it alone until something new comes up. And if Ptaah stays over there for a longer time, the talks with him will fall flat.

#2) 2003 Feb 3 BLK 8 CR 334 Reported by Enjana

Billy: With Ptaah, is everything going well there – and will he return soon?

Enjana: Everything is going according to expectations, which means that no difficulties have arisen, and none are to be expected. His return will still take some time.

Billy: What also interests me: What can be expected in terms of life and physical concerns in the foreign universe?

E: According to the latest information, no human life-forms have been found yet, neither in a more highly developed nor in an original form. On several occasions, however, very low life has already been found.

Billy: You mean microorganisms?

E: Yes, and in many different forms. But higher life must already exist in this universe because different amino acids, etc. were found. Ptaah expects that sooner or later he will also encounter human life

#3) 2003 Feb 16 BLK 8 CR 336 Reported by Florena and Zaphenatpaneach

Zafenatpaneach: Ptaah sends you the information that his expedition is successful in its search for human life.

Billy: This is indeed a surprise. What kind of human beings were found, advanced or highly developed?

Florena: If by your question you mean human first life or human life already capable of high technology, then this is not true. It is neither low developed nor highly developed life. The life-forms found live in natural caves and are therefore still very primitive forms, but nevertheless capable of reason and conscious mind.

Billy: Cavemen, then. Then they will have some tools, right?

Z: As Ptaah reports, the found human beings have various stone tools and weapons made of polished or split stones. So, they are in possession of self-made stone clubs, knives, and spears.

Billy: Then one finds that the development takes place similarly as it did on our good old Mother Earth.

Z: That is right, because wherever human life is created on planets, the same developmental phases and developmental processes naturally take place.

Billy: So not only in our universe, but in every one that has a gross material belt and therefore stars, galaxies and planets and comets, space nebulae, meteors and everything else?

Z: Your assumption is correct.

Billy: But the expedition will continue?

Florena: That is the case, yes. The expedition will go on for some months.

Billy: I did not think Ptaah would return so soon.

#4) 2003 March 19 BLK 8 CR 340 Reported by Quetzal

Billy: – Is there any news about Ptaah?

Quetzal: He reported that many new things were discovered which are unknown in our universe and which must have developed and changed and dissolved at the earliest times. The calculations showed that the foreign universe in its total existence is 22 trillion (22,000,000,000,000) years younger than our DERN universe. The material belt, and thus the visible material universe, has a current age of 9 billion (9,000,000,000) years and is therefore much younger than ours. Apart from micro-organisms, diverse small life-forms and a planet with primeval human life-forms and all kinds of small, medium, large and very large animals as well as air and water beings, no highly developed life-forms have yet been found, by which I mean beings of the human species. Probably it will still take a long time before such life is found. As has been shown by the discovery of the primeval human forms, highly developed beings must therefore also exist.

Side note: Our Universe is 46 trillion years old. Theirs is thus 24 trillion years old. And our material belt is about 17 billion years old.

Billy: Let us be surprised about what else turns up. Have you actually created a name for the foreign universe yet?

Q: A provisional name was given, but in the meantime, according to Ptaah's proposal, the name RADERN universe has been established for the foreign universe.

Billy: I see, I see, I see. What does this designation mean?

Q: Of course, you cannot know that. The term RADERN refers to the abbreviation of 'Rane Alinu-Dajansini ern ruan nitrapralano'.

Billy:

Right. Very interesting, but I am standing like a donkey on a mountain, because apart from 'Dajansini', which means Creation, and 'Nitrapralano', which means unveiled, everything is like a Bohemian village to me. Unfortunately I cannot understand more. And how is everything written?

Q: I understand. In our written language, all nouns are written with capital letters, as is every word at the beginning of a sentence. You can take the German written language as a model. The name 'Rane Alinu-Dajansini ern ruan nitrapralano' comes from the old language of Nokodemion and means: "New foreign Creation that unveils itself."

On a Side Note: DERN and DAL (a Universe in our sister Creation) abbreviations/ meanings are also known:

DERN: is an abbreviation for the name given in the old Nokodemion language:

"Dajansini ern ruan nitrapralano" = "Creation that unveils itself."

DAL: is an abbreviation for the name given in the old Nokodemion language:

"Dajansini arg lasergnoralin" = "Creation as second born"

#5) 2003 June 3 BLK 9 342 Update by Florena

Billy: ... By the way: Has something new come up with Ptaah?

F. I have forgotten that – he sends his regards. Everything goes well with his expedition, which also discovered technological things that testify to more highly developed life of a human nature. It is a highly technological probe drifting through space, but its originators have not yet been found.

Billy: There can be no doubt that the origin of the object will be found, since Ptaah and his team will surely follow the probe's trail of origin and sooner or later find the makers.

F: That will certainly be the case.

#6) 2003 July 21 BLK 9 CR 345 Ptaah is back!

Man, friend, Ptaah, this is really a surprise. Be warmly welcomed and greeted, you universe explorer. Tell me, since when are you back here? Florena only told me today at noon, that today someone will still drop by, but she said nothing about [the fact] that this would be you. Clearly it goes well with you, and you also appear to be contented, therefore I assume, your expedition must have culminated successfully.

Ptaah: You are very pleased to see me, my friend. This applies however also on my part, and it particularly pleases me to see you well and in good health. You be greeted as well. –Yes, your assumption is correct because my expedition was successful. This at least for the first venture, about which you certainly want to hear, I assume, yes? To say is this, that suddenly everything very quickly has come to an end because on the 30th of June when we have unexpectedly found a humanity, to which a probe in space brought us when we searched for its origin. Unfortunately, I do not have enough time today to explain everything in detail, so I will do so at a later point in time.

Billy: Of course. I know, because Quetzal reported to me regarding this probe*. However, he was of the opinion that your expedition was to last still a longer time. Now, however start shooting – briefly and succinctly. What arises from the foreign universe? You must not be detailed, but just briefly and succinctly describe the most important events. We can talk about it at a later time in detail, as you say.

**This was only documented in the previous contact report with Florena. Quetzal must have spoken about it in private with Billy*

P: So then listen:

Actually, it appeared, that we must extend our expedition still several months, but then success arrived unexpectedly. First, after several months of searching we found a planet, on which rather still wild humans lived, who were only equipped with stone axes, stone spears, and stone knives.

Billy: Thus, cave men, respectively Stone Age humans or similar, correct?

P: Yes. They lived partly in caves, but also partly in primitive huts, which they made out of branches, leaves and moss. Across the planet, we were able to identify 46 different groupings. The planet itself had large primeval forests as well as fertile land, on which many and diverse animals roamed and fed themselves on all kinds of things. You can yourself imagine approximately the same appearance that Earth presented around six million years ago.

Weeks later, after which we further penetrated into the foreign universe, we came upon a small artificial object, which was drifting through free space. When we got hold of it, we established, that it was a probe created by intelligent life-forms, which certainly had served for the exploration of a planet, but however apparently was driven from its course and was thrown out into free space. So, we calculated the flight path of the probe and followed it for several months, after which we then actually reached a solar system, in which about a dozen planets moved around a central star, although certainly only two of the planets were developed in such a wise, that they were able to carry higher life, as we soon discovered.

On one of the planets, the third, which was somewhat smaller than Earth and which was about 1.51 astronomical units distant from the sun and which travelled on its 677-day long orbit about the central star and had a self-rotation of 21 hours and 37 minutes, there existed no human, but only higher animal lifeforms of primeval form, as well as also this primeval condition applied to the vegetation.

The second planet, somewhat greater than the Earth, had three large island continents, which existed in a large salt-water ocean and were surrounded by a large number of smaller islands. Their entire mass was around one third greater than the continental masses and islands of Earth together. This planet was at a distance from the sun of 1.48 astronomical units and had a self-rotation of 22 hours and 52 minutes.

On a side note:

in CR 246 it is stated that the accurate figure for our au is 152,955,347 km which is 1.0 au.

Billy says our scientists have this slightly incorrect at 149,597,871 km.

Our scientists now say the habitable zone is 0.99 - 1.7 au, with a mean au of 1.34.

CR 246 au figures range from 1.00 (Earth) -- 1.52 au giving a mean of 1.26 which is within 1%, making a 1.27 au mean possible for the habitable zone where life arises, and human life-supporting physical matter emerges.

CR examples, however, are too few to assume a universal mean au.

Thus, that is why the 'third' wild planet, previously mentioned, with an au of 1.51, with diverse lifeforms already, will most likely eventually develop human life forms of its own, or perhaps when this 2nd planet, with the three continents, has reached higher technological capabilities and are able to travel in space they will colonise it. Who knows?

It sure would be handy if we had a 2nd inhabitable planet nearby! Oh wait, we do, Mars is 1.52 au away, it just squeaks into the habitable au range ...small problem is that there is no atmosphere there.

Ptaah continues: The planet carried human civilisations, in fact there were three different races, which consisted of diverse peoples, who were of white, green, and blue colour, adding to a total number of around 498 million human beings. Our clarifications, which we carried out unobserved and without direct contact undertakings with the occupants, resulted in astonishing things as I want to explain as follows:

The populations of the three continents speak only three different languages, each with a uniform dialect, which we have not found anywhere else. And although the three races work together in every respect, such as, medically, scientifically, and technologically, etc., they do not mix with one another in the wise that there would exist marriage alliances between members of different races.

All three races had the same culture, the same state of knowledge in all things and a medical science, which, highly developed, registered only just minor sicknesses, so in this respect they are far ahead of terrestrial medical and surgical science.

There was nothing to find regarding religions and cults of any kind, because all three races do not recognise belief in any wise, but only a kind of universal philosophy, which is based on the fact, that all life and existence arises from a higher power, which is simply called the 'Might' by them. This is quite reverently observed, respected, and honoured, however it is not worshiped and not venerated. The 'Might' constitutes for them all origin of life and all existence, which both comes to be, and again passes away and again comes to be, and a unity in a duality is taught, so the material and the 'Might', which lives in the material, passes away and again comes to be, while the material dissolves and changes into other material forms.

Billy: This is practically the reincarnation of the spirit-form. The 'Might' would be then simply Creation and at the same time the spirit-form.

P: It is so, just only with other terms, as well as also everything interpreted and understood by the occupants of the planet. Regarding these three races still is to say, that they are absolutely peaceful, in fact, both from human to human, as well as however also among the races and their peoples themselves. Wars are foreign to them just as well as hate and criminality, and purely technologically viewed, they are at the position which prevailed with Earth-humans in the year 1968.

Billy: Astonishing. Then, these human beings are far ahead of earthlings. However, how is it then with the form of government?

P: Each people decides together on all interests, although a total representation of all three races exists, which is built in the form of an assembly of men and women, which as highest authority is to gain the required recognition of the will of the people.

Billy: A little complicatedly expressed, my friend. If I correctly understand your words, then with these three races and their peoples so to say there exists a combined leadership, which consist of persons, respectively representatives, of all three races. This leadership personnel exists in the service of the people, respectively of all peoples and executes their decision, respectively, they are responsible for the fact, that the will of the people, respectively, peoples is carried out. Then it is so to say a proper democracy. And how is it with these leadership personnel, do they have then also their own power of decision?

P: Your interpretation corresponds to the sense of my words. The leadership personnel, which consists of three persons from all peoples have only executing and advisory powers of the respective peoples and they do not have their own possibility for decision. All leadership personnel are elevated to the standing of wise persons, whose duty it also is, to work out all required necessities and present them to the people, who then decide about them. Incidentally, the three races and all their peoples do not know any party system, as is the case with the Earth-humans. On the other hand, they have the manner of voting in the wise, as was the case since ancient times in Switzerland in the manner of rural communities, in which the majority decision applied. The interests, on which must be voted, are announced first by the leadership personnel on the day of the vote, when the people assemble and have to deliver a for, or against, vote. So, therefore, no previous consultations are able to be made, consequently each citizen of each people according to his/her own discretion and in accordance with his/her decision has to make their own choice.

Billy: Interesting. How is it then with the military, respectively the armed forces?

P: Here, pure harmony and peace exists among all three races and all of their peoples for a little more than 1,208 planetary years and no armed forces and no weapons industries for military purposes exist.

Billy: And so, what about the police?

P: There is no such organisation in the wise, like on the Earth. There are powers for order, but these form a law-and-order protection and security protection, which provides for the order and security of the population in relation to natural events, by which I mean natural events. The races and their peoples themselves live in an orderly manner, which has no one who has gotten very badly out of control of the good human nature, like this is the case with the peoples of the Earth.

Billy: So to speak, an ideal state.

P: In certain respects, one can indeed speak of an ideal.

Billy: What to me is still of interest, dear friend is their technology of locomotion. Do they have also still such primitive airplanes and automobiles, etc., like we on Earth? This is certainly to be assumed, if they have the technological position, which we possessed in 1968, am I correct?

P: Your assumption is not entirely correct, because certainly they have a similar technology of locomotion, but the drives are not sustained by explosion motors using benzene and diesel oil, but they are driven with synthetic substances. All three races and all of their peoples do not exploit the petroleum of the world. All necessary substances for all things are from plants of many kinds as well as produced synthetically.

Billy: And the food?

P: There exist large community gardens as well as joint farming holdings, like gardens and small farms, which however are also run by individual persons or small groups. And before you ask:

There are economically useful animals kept and bred for work and for food purposes, though however any form of cruelty to animals is taboo. Flesh for food of humans is solely produced through breeding and slaughtering of certain animals. Fruits, vegetables, and flesh of many and diverse forms as well as all other necessary food items and required products of other kinds are in abundance and plentiful, and from this follows that nowhere does famine exist. All bodies of waters and forests, meadows, fields and marsh areas are healthy and completely intact. Chemical products are not laid down for the purposes of protection or growth of plants, but only substances, which in turn consist of natural products. Hunting for any wild game is taboo, because game meat is likewise only produced through breeding, like this also is the case with the flesh of fish, etc.

Billy: Have you also established how old the humans get to be?

P: Naturally. The average age of the humans of all three races is a uniform 128 years and death as a rule is due to old age.

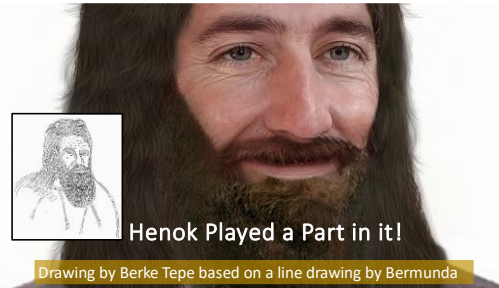

Billy: So they are also much ahead of the Earthlings in this respect. But what happens to the deceased human beings, I mean, how are they laid to rest – cremated or buried, etc.?

P: The deceased are laid out upon a stone bed far away from residential areas in especially created for them, individual small, yet very stable stone houses, after which the entrance is closed with rocks and boulders. After that, the deceased are left to decompose.

Billy: Do you mean by this something like a vault? Is it with the bereaved then also as is usual on Earth, that they visit these tombs?

P: No, this does not likewise belong to tradition as well as also not the decoration of tombs with flowers, etc. Also, no inscriptions are displayed, and no ritual at all is indulged in, at the burial. Among all races exists also no fear of dying and death. The whole thing is considered and honoured as a natural and inevitable event.

Billy: So should it also be with us. Yet tell me now: You are only really able to reach this foreign universe, because in your ancient data you had the recordings of Henok at your disposal. Was Henok perhaps already over there? And do you go back again soon?

P: The recordings in accordance with certain things indicated that Henok was actually in this foreign universe. However, we first must exactly still discover this, which a travel back in time back will certainly be required, precisely into the time, when Henok worked. On my part for the time being, I will not be returning back there, but a large part of our expedition remains over there, consequently it will further explore the three human races and everything around them as well as a large part of the universe.

#7) 2004 Feb 27 CR 353 Ptaah

Billy: One more question: In the time since you have returned from the foreign universe, have any new things happened there?

Ptaah: No. No news has been found concerning other human life-forms, although two expedition groups are very busy. So far, four different worlds have been found that carry higher animal life, but no human life-forms could be found on them.

How interesting to find out that the Plejaren only knew of the existence of this other Creation through the records of Henok! This glimpse into the mechanics of this undertaking and their findings in this other primary Creation is quite astonishing. Given that Billy's spirit form formerly enlivened Henok he probably has an inkling, if not direct knowledge from his storage banks about this... for now he's not spilling the beans, at least not to us.

Thus it remains a bit of a cliff hanger as we wait to find out what the time travels will reveal about what Henok's involvement was with these people at earlier times. Was he a prophet and proclaimer for them too? Their lives are in harmony with the natural laws of Creation and closely mirror the lifestyle and conduct of the Plejaren; is this coincidental?

We also look forward to future reports on what Ptaah's expeditionary groups find.

Compilation and Commentary
Catherine Mossman, Tiny, ON. Canada

July 2023
