

# ***KBG SYNDROME COLORING PAGES***

It can be difficult to talk about what makes people different and with ultra rare conditions like KBG Syndrome, even doctors don't always know what to say. Most people, including doctors, haven't heard of it.

We hope these coloring pages can help drive discussions around rare disease and, specifically, KBG Syndrome.

Having a diagnosis isn't the end of anything, it's the beginning of being a part of a wonderfully unique and rare family. How rare? 1 in 19 million people have a diagnosis of KBG Syndrome which we think is wonderfully rare!

By the book: KBG Syndrome is a rare genetic disorder caused by a mutation on the ANKRD11 gene, associated with a spectrum of challenges, including developmental delays, cognitive disabilities, behavioral disorders, autism, seizures, hearing loss, skeletal anomalies, heart complications and gastrointestinal problems. Most people with KBG share at least some physical traits, including a triangular face, heavy eyebrows, curved fingers and spine, and short stature.

# Z IS FOR ZEBRA

The Zebra is the symbol of rare disease. It is used to remind people of the medical expression:

"When you hear hoofbeats, you think horses, not zebras"

But sometimes, it really is a zebra!
