# PrimeServ – Computer Controlled Surveillance Maintenance

Efficient CMMS Utilisation and Maintenance Planning Software

PrimeServ Maintenance is a computerized maintenance system, developed by Baumann, which is Tailor – made for maintenance management of plant and packaging machinery.

PrimeServ maintenance provides the management and crew involved in the maintenance process with a comprehensive tool for assistance, diagnostics, scheduled maintenance, work order, parts and suppliers, work requests, data base management, costings, reports, e-mail notifications ect.

The **PrimeServ** Portable Mobile **CMMS** can be used for log meter, check work due, readings or submit work requests on any modern smartphone through the mobile APP.

Benefits of the PrimeServ maintenance software are:

✓ Increased reliability and performance of packaging machinery and other technical equipment.
✓ Reduction of operating costs and losses.
✓ Ready planning of equipment maintenance for optimum utilization of available resources.
✓ Easy and unambiguous identification of spare parts.
✓ Integrated stock handling and spare part ordering.
✓ Electronically record history of all maintenance work / inspection carried out on plant, equipment and facilities.
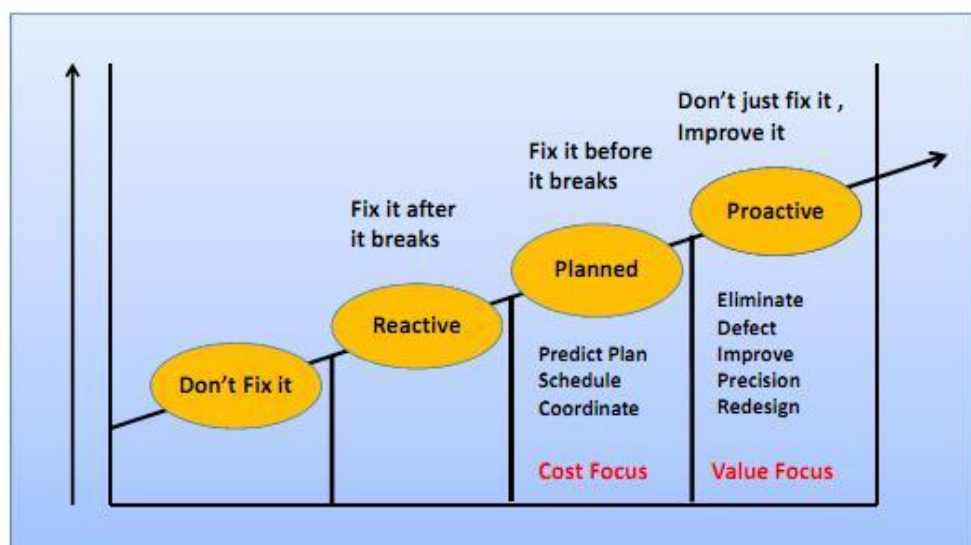

Maintenance from the Specialists

As an acknowledged leader in the field of packaging and food processing equipment, we are ideally positioned to undertake your maintenance needs. We deliver measurable benefits to your business in a number of ways:

- Expert staff dedicated to maintaining your equipment.
- No impact on your head count.
- Infrastructure savings at your site through the use of service center facilities.
- Enhanced performance, efficiency, and reliability through upgrades developed skilled specialists.

We tailor maintenance services to individual needs with a focus on contract maintenance and predictive maintenance agreements.

Performance Measures

Contract maintenance

The most common is contract maintenance, where we schedule regular pre-defined maintenance visits to check and report on equipment plus handle repair work during those scheduled maintenance periods. Coverage for emergency repair services is also often included.

Predictive maintenance

Predictive maintenance takes our maintenance service to the next level. By continually monitoring the condition of a machine, we are able to predict when it will require maintenance rather than rely on pre-set time intervals. The outcome is usually an extension in operating life between maintenance outages. In cases where more maintenance is required, breakdowns are avoided and steps can be taken to modify equipment, operational procedures, and process systems to increase operational life.

Predictive maintenance is designed to create savings over and above contract maintenance by only undertaking maintenance work when it is needed, rather than when it is scheduled.

Maintenance reduces costs

Whatever your requirement is for the maintenance of packaging equipment, we are your ideal partner to deliver increased performance and reduced costs.

PrimeServ Maintenance Software

The free **PrimeServ** software package version **PS -2** is included in every machinery equipment installed by Baumann.

- PrimeServ uses Microsoft Windows and menus similar to Microsoft Outlook interface. -
