

Frequently asked question; Standard UV Coaters

What size UV Coaters do you have available?

-We currently have the SUV-18, 19 " and the SUV-24, 25"

What is the longest size paper I can use?

-Unless you are using a feeder, there is no limit to size with any of our UV Coaters

Do you have a feeder available for your UV Coaters?

-Yes, see our SF-25

How thick of material can I feed through your SUV-24?

-Maximum thickness for any of our UV Coaters is 2mm/0.078 inches.

How long do I need to warm up the machine before I can start coating?

-Warm up time is about 5-10 minutes.

Do your UV Coaters have variable speed?

-Yes all of our models do

Can I use gluable UV with your Coaters?

-Yes you can

What kind of power do I need for the SUV-18?

-All of our UV Coaters run on single phase 220volts.

Can I run digital stock through your UV Coater?

-Yes, All of our UV Coaters work for both offset and digital

Can I do Matte coating with the SUV-24?

-Both the SUV-18 & SUV-24 can run your regular gloss and matte coating

What amount of waste will I have with these coaters?

-With these coaters will have NO waste since they have a pump recirculation system.

How long does clean-up take?

-Clean-up on either machine is fast and simple. You simply need some alcohol and a couple of rags. Average clean-up time is 5-10 minutes

What is the speed of the SUV-24?

-You must realize that the answer to this questions depends on many factors. However, on average, its speed is 2,500 per hour.

Can either the SUV-18 or SUV-24 do soft touch coating?

-No! Soft touch is very popular today, for that reason we have introduced the SUV-24 PLUS. This new machine offers a super high gloss finish which resembles glass and also gives you the soft touch finish.
