## The Search For A "Northern Route" Kicks Off The Transcontinental Railroad Expeditions

Map Showing The Five Routes Explored In 1853-54 For A Transcontinental Railroad

On June 6, 1853, the first of what will prove to be five exploratory parties heads off in search of the ideal route for the pacific railroad – one marked by straight stretches of flat land, the absence of steep grades (capable of stalling an engine), access to fresh water and lumber, and friendly tribes, among other things.

This first group is dedicated to a Northern passage along the 49<sup>th</sup> parallel. It is led by Isaac Stevens, Territorial Governor of Washington and his chief assistant, Captain George McClellan of the army

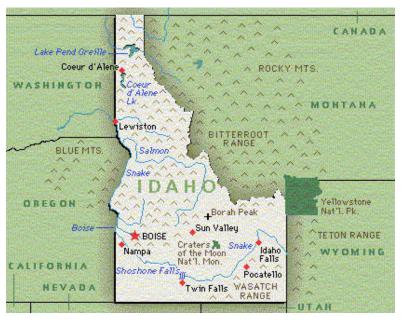

engineers. They are joined by a large support contingent including topographers, artists, astronomers, geologists, botanists, meteorologists, sappers and miners, linguists, a surgeon and a quartermaster.

By August 1, Stevens has moved from St. Paul on the Mississippi River, west to the Missouri River in what will become, in 1889, the state of North Dakota.

For the next ten weeks, the expedition proceeds across Montana and into the Rocky Mountains, with several separate contingents trying to locate a satisfactory train route.

Map Showing Steven's Move From The Mississippi To The Missouri River

On October 18, 1853, the main party arrives at Coeur D'Alene in northern Idaho, where the Jesuits have established the Sacred Heart Mission to convert local tribes to Christianity. Among these are the Nez Pearce people who proved invaluable to Lewis & Clarke in their 1804-06 journey to the coast. Stevens' diary records a "message from the Great Father" that he delivers at the Mission:

Map Showing The Path Through The Rockies To The Coeur D'Alene Mission

I am glad to see you and find that you are under such good direction. I have come four times as far as you go to hunt buffalo, and have come with directions from the Great Father to see you, to talk to you, and to do all I can for your welfare. I see cultivated fields, a church, houses, cattle, and the fruits of the earth, the work of your own hands. The Great Father will be delighted to hear this, and will certainly assist you. Go on, and every family will have a house and a patch of ground, and every one will be well clothed. I have had talks with the Blackfeet, who promise to make peace with all the Indian tribes. Listen to the good father and the good brothers who labor for your good.

After departing Coeur D'Alene, the band treks across the Washington Territory, arriving at Ft. Vancouver on November 19, 1853.

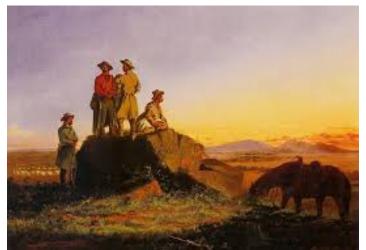

The entire trip has taken five and one-half months to complete, and the information collected will be written up in fine detail and eventually handed over to the sponsor, Secretary of War, Jefferson Davis, for publication in February of 1855.

Despite Steven's enthusiasm for "his route," critics are troubled by the failure to identify a solid path through the Rockies, and by concerns over the likely snowfall and challenging winter conditions associated with the 49<sup>th</sup> parallel option.

## **Tragedy Strikes The "Central Route" Expedition**

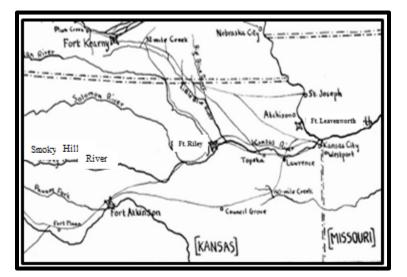

"Scouts" Lithograph By John Mix Stanley (Volume XII)

Captain John Gunnison is forty years old when he sets out along with First Lieutenant Edward Beckwith to explore a Central path, favored especially by Benton, given its jumping off point in Missouri. Their party passes through St. Louis and Ft. Leavenworth to Westport, Missouri, and departs from there on June 23, 1853, heading southwest along the old Santa Fe Trail.

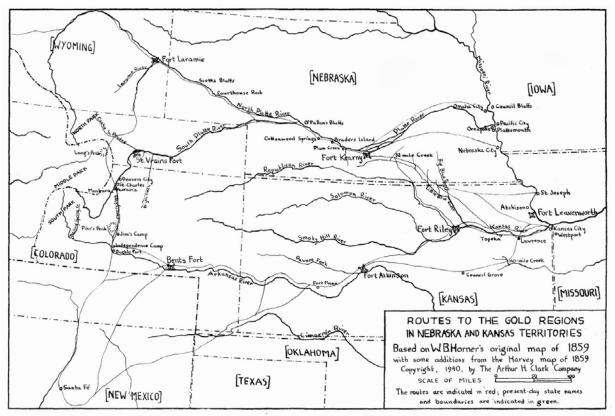

On July 4 they reach Ft. Riley, where the group splits for the first time, with Gunnison heading west over unexplored ground along the Smoky Hill River, while Beckwith drops south about thirty miles along the Santa Fe Road.

Gunnison crosses the Smoky Hill River and reunites with Beckwith at Walnut Creek, a branch of the Arkansas River, east of Ft. Atkinson. At this point, Gunnison computes that he has gone 322 miles from Westport along his river route, while Beckwith has traveled 293 miles over the Santa Fe Trail.

Map Showing Forts Leavenworth & Riley And The Smoky Hill River

They then continue west alongside the Arkansas River, past Ft. Atkinson and all the way to Bent's Fort, an abandoned military outpost, where they arrive on July 29, 1853. So far the well-known path they have followed offers no new surprises or barriers to a "Central" railway solution.

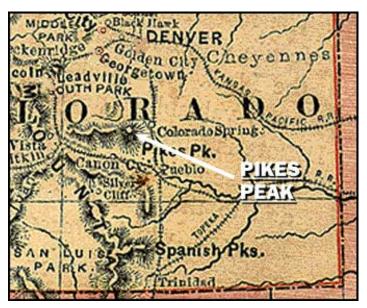

Map Showing Ft. Atkinson, Bent's Fort, And Pike's Peak

Leaving Bent's Fort they swing sharply north and, on August 6, come upon a memorable vista centered between Zebulon Pike's Peak and the Spanish Peaks in southern Colorado.

Pike's Peak to the north, the Spanish Peaks to the south, the Sierra Mojada to the west, and the plains from the Arkansas—undulating with hills along the route we have come, but sweeping up in a gentle rise.

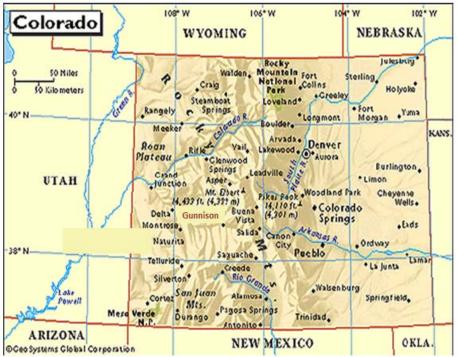

Head due west, Gunnison explores potential sites through the Spanish Peaks while Beckwith tours the San Luis Valley. Concerns are raised here about the amount of winter snow in San Luis, and the likely need for a tunnel through the mountain range coming out of the Valley.

On August 23 they reach Ft. Massachusetts and get ready to head further into the mountains toward what will later become known as the town of Gunnison, Colorado – at the eastern edge of the Gunnison River. After traveling west along the river for some forty miles, a breathtaking site, the Black Canyon, comes into view:

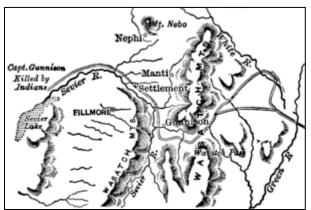

A stream imbedded in (a) narrow and sinuous canyon, resembling a huge snake in motion. To look down over...the canyon below, it seems easy to construct a railroad; but immense amounts of cutting, filling and masonry would be required.

Map Showing Pike's Peak, The Spanish Peaks And The San Luis Valley

Map Showing Pike's Peak And The Future Town Of Gunnison, Colorado.

Their journey continues into Utah over the next two months, taking them down the Colorado and Green Rivers and across the Wasatch Mountains to the Sevier River, near the Utah Tribe's Manti Settlement. Gunnison decides on October 25, to break away from the main party and explore Sevier Lake. It is a fateful decision as his detachment of twelve men is attacked on the morning of October 26, purportedly by a band of Pahvant Utes, at war with local Mormon settlers. Eight men are killed including Gunnison, who is found mutilated, with fifteen arrows in his corpse. When second-in-command Beckwith learns of the battle from the survivors, he circles back to bury Gunnison and the other victims.

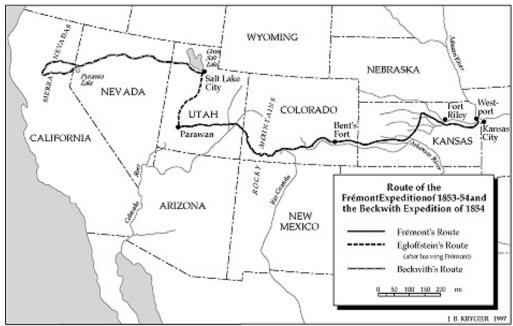

Map Showing The Green River, The Wasatch Mountains, The Sevier River, Sevier Lake & Where Gunnison Dies

The party has traveled some 1566 miles when Beckwith succeeds Gunnison. On October 31, he heads north to Salt Lake City, arriving there on November 8 and settling in for the winter. He receives orders to continue west, and sets out on April 4, 1854, heading across Nevada to the Sierra range, and reaching the Madeline Pass on June 25.

From the summit of the pass it would be easy, for some miles, to carry a railway on the hillsides, descending at pleasure; but further down, this would become more difficult, on account of the curves which the hill ravines would require, but it is still practicable. For this purpose the northeast side is the most favorable; for although containing the largest number of ravines, they are the smallest, and it is unbroken by cañones. The western descent of the pass is heavily timbered to near our present camp, and there is a fine warm spring, in a basin of rocks, just where we ascended the high spur to avoid the creek.

On July 12 Beckwith arrives at Ft. Redding in northern California, before ending his tour on July 15 at Sacramento.

Map Showing Beckwith's Route From Salt Lake City Through Nevada Into Northern California

\*

The expedition's final report covers both of its phases – the Gunnison-led search along the 38<sup>th</sup> and 39<sup>th</sup> parallels through Colorado, and Beckwith's swing further north at the 41<sup>st</sup> parallel. While both routes are deemed viable in 1855, it is Beckwith's 41<sup>st</sup> parallel leg that prevails when the actual tracks are laid between 1863 and 1869.

Entered according to Act of Congress, in the year 1893, in the Clerk's Office of the District Court of the United States for the Eastorn District of Pennsylvania, Mod LLISTER & BROTHER, 728 Obestnut St. PHILADELPUIA

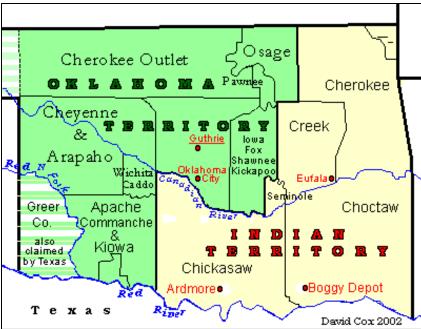

Brigadier General Amiel Whipple – KIA Chancellorsville (1818-1863)

Date: July 2, 1853

# The Upper South Route At The 35<sup>th</sup> Latitude Is Completed Satisfactorily

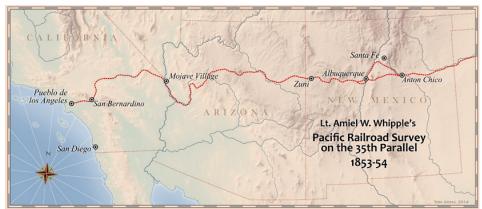

Lieutenant Amiel Whipple is chosen to lead the investigation of a route at the 35<sup>th</sup> parallel, from Ft. Smith, Arkansas, to Pueblo de los Angeles, California. He is 34 years old at the time, trained in astronomy, surveying and engineering, and just back from completion of work on a railroad line in Texas.

Whipple and his party depart from Ft. Smith on July 2, 1853, crossing the Arkansas border into the territory (later Oklahoma) set aside for the "five civilized tribes," forcefully driven off their lands around Georgia in 1837. Their path takes them between the Red River to their south and the Canadian River to their north, across the homes of the Choctaw, Chickasaw, Comanche and Kiowa Nations. They encounter no hostility along the way.

Map Of Whipple's Path West Between The Red & Canadian Rivers Into Tribal Lands

Proceeding west across the upper reaches of the Texas panhandle, they sweep into the New Mexico Territory at the frontier town of Anton Chico, founded in 1822 during Spanish rule. It is now "public domain land" owned by the United States, and is currently populated by some 500 settlers. Whipple arrives at Anton Chico on September 26, some two months after leaving Ft Smith.

Map Showing Path From Anton Chico To The Zuni Tribe, The Mojave Desert And Los Angeles

He drives on to Albuquerque, arriving there on October 3, 1853. He splits his party there into two wings to explore the upper Rio Grande Valley for an ideal route to the west. They re-group at the Zuni trail, an old Spanish road and move on toward the home of the Zuni Nation. The Zunis are descendants of the original "Puebloans," and are noted for their elaborately tiered adobe buildings, advanced horticultural skills, generally industrious culture, and complex religious beliefs, symbols and practices. On November 20, 1853, the expedition records impressions of an ancient Zuni site left in ruins:

The village was compactly built... The entrance to the dwellings was by a ladder, or rather post, cut into steps, and inclined to rest upon the roof...Fragments of pottery were strewn around...a piece of volcanic scoria was found, the first seen among the ruins; also an axe made of greenstone, nicely grooved and beautifully polished.

Upon returning to the Zuni village, they also encounter a distressing sight:

...a most revolting spectacle met our view. Smallpox had been making terrible ravages among the people, and we were soon surrounded by great numbers-men, women, and children-exhibiting this loathsome disease in various stages of its progress

Whipple's band then travels some 375 miles to the north-south branch of the Colorado River, and beyond it to the edge of the Mojave Desert in southern Nevada, arriving there on January 25, 1854.

The Mojave Desert terrain runs east to west for 150 miles into southern California. It is configured in typical "range and basin" fashion – with sizable hills rising in places to 2,000 feet, graduating into rolling flatland, including Death Valley, at 285 feet below sea level. Its summer daylight heat reaches 115-120 degrees Fahrenheit, while its winter nights plunge below zero. Standing sentinels in this "high desert" landscape are its distinctive evergreen Juniper Trees. The "up and down" features and vegetation suggest a name to Whipple's crew:

Having watered our mulada, we travelled five miles east-northeast up a dry arroyo to its head; and thence climed a steep ridge several hundred feet high, to the lowest summit we could find...From the peculiar vegetation of this place, we propose to give it the characteristic name of Cactus Pass.

Once across the Mojave, it is up into the San Bernardino mountains and then down into the valley leading to the final destination at Los Angeles. The party arrives there on March 17, 1854, just over nine months and 1500 miles from Ft. Smith, Arkansas, where they started.

Whipple concludes that the 35<sup>th</sup> latitude route is quite viable, albeit requiring some meandering around obstacles and numerous bridges to cross frequently encountered streams. But water and wood are mostly plentiful; the tribal populations seem sufficiently peaceful; and the winters mild enough to avoid the threats of snow and ice.

Date: January 24, 1854

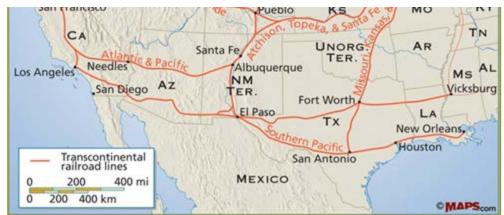

## Exploration Begins On The Southernmost Route At The 32<sup>nd</sup> Parallel

The fourth and final search for the optimum train route – this along the  $32^{nd}$  parallel -- involves two different teams, each starting at a westernmost point and heading back east.

The first group, under twenty-six year old Lt. John Parke moves inland from San Diego along the contested border with Mexico, and ends at the Rio Grande River, near El Paso. The second, led by thirty-one year old Captain John Pope, explores a host of different routes from the Rio Grande across Texas, to his final destination at Ft. Smith, Arkansas.

Major General John Parke (1827-1900)

Map Showing The General Territory Covered By The Parke & Pope 32<sup>nd</sup> Latitude Expeditions

Parke's company comprises twenty-eight engineers and explorers, along with a comparable number of U.S. cavalry troops, assigned to insure their safety in case of clashes with Mexican patrols. He departs on January 24, 1854 from Ft. Yuma, on the eastern border of California, where the Gila River runs into the Colorado River. Following along the left bank of the Gila, he is soon well into the lands of the Maricopa and Pima Tribes, along a trail blazed by Captain Philip St. George Cooke during the Mexican War.

Map Of The Gila River Junction With The Colorado Near Ft. Yuma And The Territory South Belonging To The Maricopa And Pima Tribes

By February 13 the band has traveled 390 miles from San Diego over easy terrain, albeit with scarce access to forage for their animals. Parke comments on this, as well as the warm reception from various tribal elders.

While on the Gila, the great scarcity of grass and other forage was a constant source of anxiety...but by dint of great care and attention on the part of Lieut. Stoneman...we succeeded in reaching the first of the Pimas and Maricopa's villages, with all our animals, on the 13<sup>th</sup> of February...We had numerous visits from the Pimas and Maricopa's. Their chiefs and old men were all eloquent in professions of friendship for the Americans, and were equally desirous that we should read the certificates of good offices rendered various parties while passing through their country.

Their stay is brief, and on February 16 they swing south to Tucson, arriving there only four days later, and presenting their credentials to the local Mexican commandant. Their next leg takes them further into Cochise land, past the distinctive Dos Cabezas Peaks and through the 9,000 foot Chiricahua Mountain range at the Puerto del Dado (later known as Apache Pass). They head into the Mesilla Valley and locate Ft. Webster, built to guard the Santa Rita copper mines, but recently burned, presumably by the Apaches. Parke ends his part of the Far Southern expedition on March 10, 1854, at Ft. Fillmore, on the sand hills above the Rio Grande.

Map Outlining The Territory Covered By Parke's Expedition From San Diego To El Paso

The explorers have traveled a total of 550 miles between San Diego and El Paso. The path is very direct, free of any challenging mountain barriers, and ideal for laying track. The only concern cited is a scarcity of fresh water, with only nine streams available along the way.

Date: February 12, 1854

## A Second Party Completes The 32<sup>nd</sup> Parallel Assessment

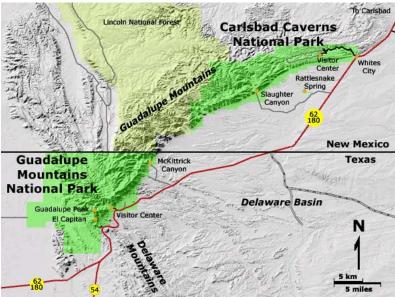

On February 12, 1854, one month before Parke arrives at El Paso, Captain John Pope sets out from Los Cruces, New Mexico, to explore potential train routes across Texas. With him are some 50 expeditionary members, and a security detail of 25 U.S. troops. Pope's orders will take him eastward through El Paso, across the Guadalupe Mountains and onto the vast Llano Estacio Desert -- then northward to the Red River border with Oklahoma, above Denton.

Major General John Pope (1822-1892)

Map Showing El Paso, the Guadalupe Range, Colorado River And Denton

After navigating the Guadalupe range, Pope sets up camp for his core team in the Delaware basin. On March 10, he sends one party back into the mountains seeking a better passage, which they fail to find. At the same time he orders his second-in-command, Captain Taplin, along with ten men, to tackle what appears to be the most dangerous part of the mission, crossing a 150 mile stretch of the Llano Dessert. While waiting to hear from Taplin, Pope has some excitement of his own, when a small band of Apaches start a prairie fire hoping to drive him off their land..

Map Showing The Guadalupe Range And The Delaware Basin

On March 13, Taplin reports that he has made it across the Llano, despite having to abandon his wagons in the sandy terrain, and suffering from a lack of water. Pope breaks camp at the Delaware, traveling east across the nearby Pecos River toward the Colorado River. He also dispatches a second party to follow Taplin's dessert path while carefully recording grades and assessing the potential to drill artisan wells for water.

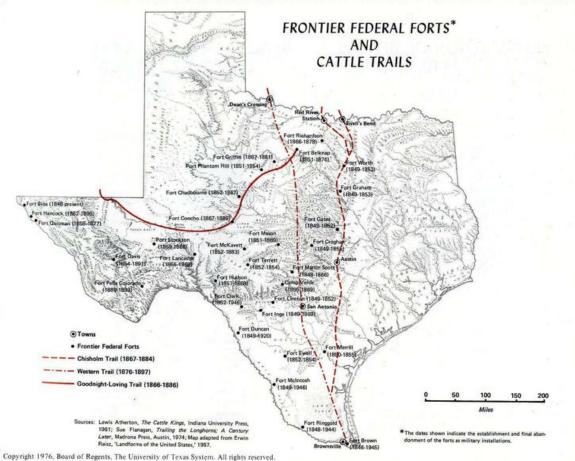

After crossing the Colorado, the main body again encounters Apaches, led by one memorable chief:

They were led by a most outre looking figure. This was Sanchoz, one of their chiefs, dressed in an infantry captain's uniform coat, silver epaulets, red sash tied over his shoulder, non-descript pantaloons, and moccasins; add to them a military cap with an enormous red pompon, and some idea may be formed of (the) exhibition....

Map Showing The Pecos, Colorado And Brazos Rivers Pope Crosses

Pope now swings sharply north and picks up a military trail connecting a string of recently constructed military forts. He stops at Ft. Chadbourne for supplies before continuing over the Brazos River, past Ft. Belknap and on to the Red River boundary of Texas near the town of Preston. His total journey has taken him 640 miles from El Paso over 83 days, including the 31 day stopover at Delaware Creek.

Map Showing Ft. Chadbourne And Ft. Belknap Along The Military Trail Leading To The Red River Border Of Texas

Pope concludes that his 350 mile route would prove ideal for railroad construction. The only challenge he sees is the shortage of water experienced at the Llanos Estacio Dessert.

## Date: 1856

## Secretary Of War Davis Issues His Final Report On The Four Expeditions

In addition to the \$150,000 set aside in 1853, Congress approves another \$190,000 to complete the expeditions.

Reports from the teams flow into Washington throughout 1854, each providing careful details about the western landscape – not only related to railroad engineering but also regarding fresh water, lumber and forage, local geology, vegetation, botany (fauna, flowers, trees, etc.), zoology (mammals, birds, fossils,) climate, barometric pressures, temperatures, astronomical locations, indigenous people, language and customs. The facts are accompanied by artist's renderings, diaries and official

Herd Of Buffalo" Lithograph By John Mix Stanley (Volume XII) Of Report)

records to bring the science to life.

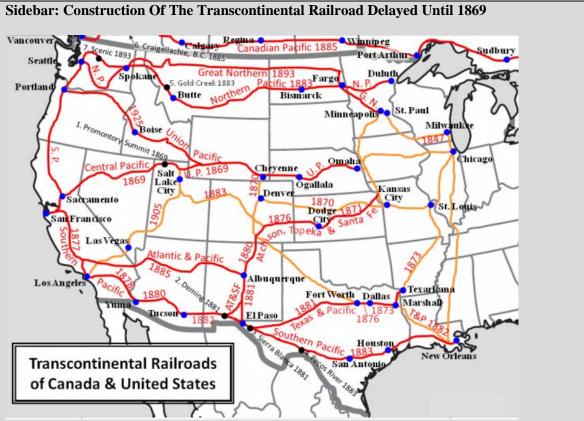

Between 1855 and 1860 a total of twelve leather bound volumes will be printed and published on the surveys, at a further expense of \$1.3 million for some 20,000 copies. Together they chronicle the sum total of existing knowledge about the Territories. The content is widely covered in newspaper reports and referenced in ongoing debates about the railroad.

Secretary of War Jefferson Davis is charged with recommending the optimal route to Congress, and he is both serious and objective in this duty.

As will be demonstrated over time, he finds all options viable, albeit with different degrees of difficulty and investment.

Still, the hands-down winner is the southernmost path from New Orleans through Texas to El Paso, and on to Yuma and Los Angeles. The route is very direct, over land that has relatively few mountains, and a generally mild winter climate. Its only drawbacks are some areas where water and forage are scarce, and a strip of land west of El Paso that remains disputed with Mexico (soon to be resolved with the "Gadsden Purchase").

Davis announces his conclusion to Congress in 1856.

Map Showing The Nation's Principal Railroad Lines Up To 1890

Unfortunately the ambitious plan to begin construction on the railroad is postponed due to sectional animosity that intensifies in the 1850's over the future of slavery in the west.

Action materializes only after the South secedes from the Union and the Civil War is under way. On July 1, 1862, then President Lincoln signs the Pacific Railway Act incenting two corporations to construct tracks along a central route at the 40<sup>th</sup> parallel, from Council Bluffs, Iowa to San Francisco, California.

Ironically this is the path terminating in Chicago favored by Senator Stephen Douglas since 1845 and ignored during the 1853-55 surveys. The Little Giant, however, never lives to enjoy his success -- dying suddenly on July 3, 1861, of typhoid fever, at only forty-eight years old.

The Two Corporations who Build The First Transcontinental Line By 1869			
Corporations	Line Runs	Key Owners	Details
The Union Pacific	Council Bluffs, Iowa	Dr. Thomas	Construction head is
	Omaha, Nebraska	Durant	J.D. "Pete" Criley,
	Cheyenne, Wyoming	In 1880, Jay	backed by largely Irish
	Ogden, Utah	Gould	vets of the Civil War
	Promontory Point,		working for a
	Utah		handsome \$2 a day.

The Central Pacific	Promontory Point,	"The Big Four"	Begun in 1863 with
(later the Southern	Utah	Leland Stanford	Crocker as construction
Pacific line)	Sacramento, California	Collis Huntingdon	head and 15,000
	San Francisco,	Charles Crocker	laborers, 80% Chinese
	California	Mark Hopkins	immigrants

This deal struck by the ex-Whig Lincoln is right out of the Henry Clay playbook for developing needed infrastructure through a combined public and private partnership – with each side sharing in the risks and the rewards.

The underlying assumption is that "demand" for the new railroad will be sufficiently great to off-set what are certain to be staggering construction costs. For this to be the case, the new trains must transport both goods and passengers at a much faster rate and with less risk than the existing option – ships sailing around South America's Cape Horn.

The 1862 bill gives each corporation "rights of way" land grants to lay their tracks, surrounded by 200 feet on each side of the rails. In total, some 175 million acres -- equaling the size of Texas – are handed over by 1871.

The capital required for construction is raised through government backed bonds issued to investors with a guaranteed 6% per year rate of interest. The target amount assumes roughly \$16,000 per mile of track laid on flatter land, and from \$32,000 to \$48,000 per mile between the Rocky and Sierra Mountain ranges. This money is temporarily loaned to the corporations to cover their costs for building the lines – to be repaid in full once the trains are running and producing revenue for the private owners.

After some six years of hard labor by largely Chinese and Irish work crews, the two lines – spanning 1,928 miles -- are joined at Promontory Point, Utah, on May 10, 1869. By November of that year, commercial traffic is up and running, including passenger travel from Council Bluffs, Iowa, to San Francisco, for a one-way fare of \$65.

The costs to construct the first line are less than originally thought, albeit still immense -- at \$36-52 million for the Central Pacific portion in the west, and another \$60 million for the much longer, but "easier" Union Pacific branch.

Once shaken down and running smoothly, the hoped-for advantages of the transcontinental train for both commercial shippers and passengers are readily apparent – in greater speed and reliability.

THE FIOLINEW TOLK TO S	FION New TOLK TO San Flancisco 1870	
	Number Of Days	
Transatlantic Railroad	4-10 Days	
Sailing Ships	100	
Wagon Train	150	

What follows is a financial boom for the railroad corporations that mirrors the gold rush, and tycoon status for the lead investors, who are soon known as "Robber Barons" for their ruthless business practices.

The Early "Robber Ba	The Early "Robber Barons" Of Railroading	
Mark Hopkins (1813-1878)	Leland Stanford (1824-1893)	
Henry Plant (1819-1899)	Henry Flagler (1830-1913)	
Collis Huntington (1821-1900)	Jay Gould (1836-1892)	
Charles Crocker (1822-1888)	E. H. Harriman (1848-1909)	

The rapid financial success of the Central line spurs other corporate entrepreneurs to follow suit.

On January 12, 1883 the Southern Pacific completes its construction along the 32<sup>nd</sup> Parallel route explored by Parke and Pope in 1854. It connects New Orleans with Los Angeles.

Eight months later, on September 8, 1883, the Northern Pacific celebrates its Completion Ceremony in western Montana, with then President Ulysses Grant in attendance. It traces the 49<sup>th</sup> Parallel line favored by Isaac Stevens in 1853, and links St. Paul, Minnesota to Portland, Oregon.

Corporations	Line Runs	Key Owners
Southern Pacific	New Orleans, Louisiana	Timothy Phelps 1865
	San Antonio, Texas	Sold in 1868 to the "Big
	Sierra Blanco, New Mexico	Four"
	El Paso, Texas	
	Tucson, Arizona	
	Yuma, Arizona

	Bozeman, Montana	
	Butte, Montana	
	Portland, Oregon	

## **Two More Transcontinental Lines Are Completed In 1883**

Finally there are the "connector lines" that are crucial to making the entire system efficient. Some, like the Atchison, Topeka & The Santa Fe provide north-south arteries that complement the east-west drift of the transatlantics. Others, like the Chicago, Rock Island & Pacific, act as the central hub linking the west and east coasts.
