

The Bumblebee Bungalow

Bumble Beehive

What's included:

To assemble:

- 1) Using a phillips screwdriver, manual or power, center the "Base" to the bottom of the barrel and attach with 4 of the provided wood screws.
- 2) Repeat this process to install the "Entrance" to the front of the hive using 3 wood screws.
- 3) Place outdoor in a secure area with the entrance facing the morning sun. The location must be shaded at noon so that the sun is not directly on the hive to avoid overheating. Under a tree or bush works great.
- 4) In early spring the bumble bee queens search for the perfect home and this is designed to be it. Once the queen moves in, let her be and she will take it from there.
- 5) Recommended: Before spring place a damp rag with mineral oil and drape it over the hive for 3 hours. This is safe for the bees and will soak into the oak, prolonging the life of the hive.
