

POST-TREATMENT INSTRUCTIONS FOR EYELINER

It will take approximately 30 days for your eyeliner to completely heal.
Until your eyeliner is completely healed...

Be patient with the process

It is *normal* that your eyelids feel sore to touch (initially), a little swollen or they begin to get itchy. **DO NOT RUB THE AREA**

- Every 2-4 hours for the first 24hrs you will need to gently pat or wipe the dried blood and serous fluid off your eye area with wet cotton balls.
- Using a Q-tip, apply a very thin layer of vaseline to each eyelid 2-3 times a day until the initial healing is done. This may take between 7-10 days.
→ Keep them moist and do not let them dry out! ←
- Do not use any make-up on or near your eyes until the initial healing is done.
- For any initial swelling, you can use crushed ice or frozen peas in a ziploc bag. Make sure you wrap with a soft paper towel or kleenex. Apply to eyes for 20minutes on/off as often as you want during your first 24hrs. Do not leave on longer than 20 minutes at a time.
- If your eyes feel dry you can use over the counter natural tears.

Some clients have chosen to use Ibuprofen or Tylenol for mild discomfort and Arnica Montana for bruising and swelling.

Please check with your doctor before taking ANY medications over-the-counter or prescription.

Please contact your doctor immediately if you have prolonged pain and redness around your eyes or begin running a fever greater than 101 degrees
