

ABA RESEARCH REFERENCES AND TREATMENT GUIDELINES

Research Supporting the Efficacy of ABA in Autism Treatment

Findings from hundreds of applied studies focused on understanding and treating ASD published in peer-reviewed journals over a 50-year span indicate that ABA is a highly effective method to teach children and adolescents with Autism Spectrum Disorders (ASD) and other developmental disabilities.

ABA practices have been endorsed by the American Academy of Pediatrics, National Academies of Science, the Surgeon General, the National Institutes of Health (NIH), and the Association for Science in Autism Treatment, among others.
