

Silage Packing Unit 40-50-60 Maxxium

Stationary / Mobile Machines with
Precision Forage Chopper

- High Compaction
- Corn Cracking
- Super Napier Silage
- 3 in 1, Silage + Green + Dry Grass Cutting and Packing
- Reliable Feed Solution for all Animal Fams.

MAKES FODDER
BLOCK 30 KG
SELF LIFE 2 YEARS

High productivity and durability!

Technology Invented in BRAZIL
Made in INDIA

**Silage Cutting and Packing Units
VIDHATA, One stop Feed Solution for the farmer!**

Vidhata Silage Packing Plant were Designed specially for the most demanding farmer that need to become more economical and improve the quality of feeding of their livestock. They deliver superior productivity, a precise and unique transmission system and excellent chop quality Silage resulting from perfect synchronization of the feeding drums and packing green grass.

The Chaff Cutter has powerful rotor with 4 knives chops super napier grass, sugar cane, sunflower, maize, sorghum and other forage, with precision and excellent distribution of particle sizes. They are technically for silage making and are ideal for fresh cut feeding also.

Several options of capacity and versions allow the farmer to choose which one meets best his needs to produce a quality feed with low operating cost. 1D,2D,4D,5D,6D,8D

Made Good Silage

SiloPack 8D with

VERSIONS	JF 40 MAXXUM	JF 50 MAXXUM	JF 60 MAXXUM
Base for electric motor	X	✓	✓
Base for diesel engine	X	✓	X
3 point linkage for tractor	X	✓	✓
Pull type with wheels for tractor	X	✓	✓

• Tractor PTO is Standard version, for engine & motor base frame charge Extra.

TECHNICAL FEATURES	JF 40 MAXXUM	JF 50 MAXXUM	JF 60 MAXXUM
Productivity ¹	0	2000 kg/h	2500kg/h
Cut sizes	5 and 13		
Number of blades	4		
Required electric motor power	0	20 H.P.	25 H.P.
Required revolution ²	1400 to 1600 RPM		

Motors are optional and sold separately.
Productivity may vary according to factors like chop size, massa per hectare, transport availability, and tractor power. For stationary machines, productivity may vary according to workforce availability, feeding rate, motor power and product quality.
Rotor RPM varies according to motor power used.

Advantages

- Packing at hydro pressure to make Quality Silage.
- Preserve more micro nutrient in your feed by cut & pack Instantly.
- Chop size changing by lever. The only one in market able to change chop size with the machining running in low rotation. Easy and quick handling;
- Transmission and particle size control systems are strong, simple and synchronized. Drive from cut size gearbox to feeding drums are made by cardan shafts and gears which ensure a precise and well distributed chopping;
- Exclusive drive transmission system for all models PTO driven version, resulting in higher efficiency and higher output;
- High resistance machine because of heavy duty rotor with 4 hardened steel blades and sealed cut size changing box;
- Excellent particle size quality with sizes 5mm and 13mm which results in a better quality of fodder for the animal to easy digestive.
- Adjustable pressure to compress fodder.
- Low maintenance, high durability smooth running.

Corn Cracking at 5 mm
(Higher KPS)

Increase Milk, Fat
& SNF
Improve Animal heath

Technical Description: Precision forage choppers with productive capacity according to the technical specifications table of this document, featuring feeding nozzle, rotary discharge chute, deflector, chop size selection gear box, transmission cardan shafts, helicoidal transmission gearbox, spring for feeding drums, crown and pinion housing, rack (stand) and rack with wheels, strong rotor with 4 knives for cutting grass, sugar cane, sunflower, maize, sorghum and others, knives built in special and hardened steel, counter-knife with 2 lives, lever for changing the chop size with machines running in low rotation, transmission by cardan shaft and gears. In order to know models and versions, required power and rotation please check the technical specifications table available in this document.
