

News Release

Pop-Link Mounting System, by ADandD, is excited to announce an addition to The Bracket Series: The PL-SB50.

This bracket is compatible with several different sensors including IFM and Keyence, as listed on the above image. Additionally, although not depicted, it is compatible with Banner Q4X series. The PL-SB50 is different than most other sensor brackets in The Brackets Series, as it is straight and the sensor mounts to the side of the bracket instead of through the bracket, therefore our typical bracket "twist" is not required. The stainless steel PL-SB50 mounts to both our PL Series and our HD Series. Because it is compatible with so many sensors, mounting hardware is not included with the bracket.

This PL-SB50 has a list price of \$19.50. The PL-SB50 is made of Stainless Steel. Please contact us with any questions... we look forward to hearing from you!
