Use the Read–Draw–Write process to solve each problem.

1. Sasha is training for a competition and plans to do 96 push-ups in one day. She plans to do these push-ups in sets of 16. How many sets of push-ups will she need to do to reach her goal of 96 push-ups? Show your thinking, including an estimate and a check.

Estimate:

Divide:

Check:

2. A camp plans to take its 92 students on a field trip. Each bus holds 21 students. How many buses does the camp need for the field trip? Show your thinking.

- 
3. There are 92 coins split into 21 piles. Each pile has the same number of coins and as many coins as possible. How many coins are in each pile?
