

My name is Michael Bickelmeyer. I am running for President of the United States of America as a Republican in our 2016 election. My background entails more than 40+ years of work experience in the private sector. I have worked in business commerce and industry. I am a high school graduate of the City of Parma School System, 1977. I earned my Associates of Arts Degree from Cuyahoga Community College, 1985. I earned my Bachelor of Science Degree in General Business Administration from David N. Myers College, 1996. I am a Security Academy Graduate of Cuyahoga Community College, 1999. I earned my Master of Management Degree from the University of Phoenix Online, 2013.

My platform is comprised of three Federal Projects. These projects address National Security, Job Creation, and Environmental Issues. They are an adaptable airport system with industrial zones and clean energy generation, and an industrial recycling facility utilizing clean energy generation, and a weapon system which have titled a gift for children. The potential of the airport system with industrial zones and clean energy generation, and the industrial recycling facility can entail glass plastic aluminum copper and steel. This potential as at minimum of six facilities for each State in America for a minimum of 300 facilities across our Nation.

My intellectual property which is at The United States Patent Office entails an airport system with steam heated runways. The design incorporates an industrial facility at the center of the airport system. The airport system is designed as a perfect square with two runways per each side, and the industrial facility at center. The industrial facility at the center of the airport system can incorporate recycling die casting and manufacturing. The entire facility is powered by clean energy generation. Because the airport and industrial facility is powered by clean energy generation, there are zero carbon emissions, zero greenhouse gases, and therefore zero global warming affects.

My intellectual property for an industrial recycling facility is comprised of a 300 foot by 900 foot building containing five industrial furnaces for recycling. Each furnace can hold and regards to aluminum in excess of 100,000 pounds of product. This is currently an active grant application project with the United States

Department of Agriculture in Columbus Ohio. The configuration of this facility and furnaces will accommodate glass plastic aluminum copper and steel. Each material as designated to a separate facility. These industrial recycling facilities are powered by the same forms of clean energy generation as the airport system. Therefore zero carbon emissions, zero greenhouse gases, and therefore zero global warming affects.

Both the adaptable airport system with industrial zones and clean energy generation and the industrial recycling facility are supplemented by the same forms of renewable clean energy generation. They are solar collectors, wind powered generators, hydrogen fuel cells, geothermal power generators, solid oxide fuel cell generators, biomass power generators, magnetic power generators, hydrogen electrolysis generators, and hydrogen fusion power generators.

My third form of intellectual property is also at The United States Patent Office. This is a weapon system I have titled a gift for children. Its purpose is to assist the United States with our war on terrorism and drugs. The system is an apparatus which deals with satellite control systems. Implementation of the weapon system will be cost-effective to America and save American lives. It is not labor intensive. The weapon system is designed to magnify sunrays from Earth's outer atmosphere. The operation of the weapon system is designed to be functional during both day and night. Through the use of reflective panels and earths outer atmosphere sunrays are directed to the weapon system. The sunrays pass-through a chamber which contains a series magnification lens systems. The targeting system is designed to eliminate a single combatant with a variable expanding to entire countries. Because there is no use of nuclear technology this eliminates any radioactive nuclear fallout.

My three Federal Projects are on file with The White House, The United States Secret Service, The Central Intelligence Agency, The Department of Defense, and The National Aeronautical Space Administration. I began development of these three Federal Projects in January 2002. My acceleration in the development of these projects began after a simple Greyhound bus trip to Washington DC in the fall of 2005, whereby I stayed at Hotel Harrington in room 1104.

A full description of my three Federal Projects with drawings is available to everyone's knowledge at my campaign website. This website is www.MichaelBickelmeyer.com. Please click on the research tab on the homepage and enjoy the reading. I believe in transparency and believe the information I have disclosed in my website is more personal than any other Presidential Candidate in our Nation's history. This information contains my reflection statement, birth certificates, background check, and resume, Social Security earnings statement over my total working years, personal income tax returns, business income tax returns, education, employment, government communications, and three of my research papers at the graduate level.
