

What to expect during our Enterprise Integrator Education

Enterprise Integrator gives you an extended ERP desktop based on the Infor ERP XA Java Architecture. You can integrate user-written or third-party applications to this client-server architecture easily and quickly, allowing you to access this information using the same user interface, even navigating to and from Infor ERP XA. Or, you can design completely separate systems.

Our Enterprise Integrator education is not only designed to teach you the feature/functions of the tool, but also provide you with examples to get you started on your first project.

Enterprise Integrator user education outline
