Emergency Communications Plan

SAN MATEO COASTSIDE EMERGENCY COMMS NAMING CONVENTION

Rev 1 - 8/23/17

Since the South Skyline Area has residents in and receives emergency assistance from three counties (San Mateo, Santa Cruz and Santa Clara), I have tried to consolidate the emergency communication frequencies from each into one Plan. Each County has a much more detailed plan in place for their entire County.

San Mateo County – New Emergency Communications Plan

San Mateo County, for emergency communications and services, has divided itself into Bayside and Coastside. The Coastside OES is divided into three branches: **Branch 1** is from the southern border of Pacifica to Frenchman's Creek; **Branch 2** covers Half Moon Bay from Frenchman's Creek to Tunitas Creek Rd.; **Branch 3** covers La Honda, Pescadero and South Skyline from Tunitas Creek Rd. south to the county line.

San Mateo Coastside has recently developed a new Emergency Communication Plan which is based on three broad categories: **Control, Command and Tactical**. **Control** is our communication to The County seat, OES or Red Cross. The **Command** Net is the frequency where command in an incident, logistics and administrative traffic takes place. **Tactical** is used for on-scene communications and tactical traffic is simplex (radio to radio, no repeater). As an incident gets larger, more tactical frequencies may be assigned to it. Sometimes, on small incidents (e.g. within a neighborhood), the tactical frequency is also used as the command net. To make it easier to choose the appropriate frequency, they are labeled by category (control, command, tactical) and by Branches (11 – 19 used by Branch 1, 21 – 29 used by Branch 2 and 31 – 39 used by Branch 3). On the full San Mateo Coastside Comm Plan, you will also see groups 91 – 99, which are county wide assignments and group 71 – 79, which are used for function specific nets not tied to any one Branch. Unless you are a member of one of those specific nets (e.g. Bay Area Hospital), you can safely ignore the 71 – 79 frequencies.

In addition, the Coastside Plan identifies the Tactical frequencies by band: VTAC is for VHF; UTAC is for UHF and LTAC is for low VHF. On the Command and Control frequencies, which operate through repeaters, the Plan also includes simplex frequencies to match the output of the repeater, to be used in the event of a repeater failure or if you are on the fringes of the repeater's coverage but within simplex range of the party you wish to reach. These simplex frequencies are indicated in the Plan by a "D" which represents "Direct Simplex Talk Around" function. While these frequencies do not use a repeater, it is a good idea to program your radio to transmit the repeater output CTCSS as indicated in case the other stations you are trying to reach have their tone squelch enabled. Using the TONE setting for simplex offers maximum compatibility: It un-mutes the speaker on receiving any signal (above the squelch threshold) and transmits a PL tone so that even radios with the most restrictive setting (TSQ) will un-mute. Note: In the original Comm Plan, the Simplex Talk Around Function was indicated by a "*". Some Ham radios do not allow this designation; therefore, it was changed to "D".

South Skyline Plan

The South Skyline Emergency Communications Plan represents a combination of the San Mateo Coastside Branch 3 Plan, the Santa Cruz and San Lorenzo Valley ARES for Santa Cruz County, the Santa Clara and Loma Prieta ARES for Santa Clara County and the Las Cumbres repeaters. I've also included GMRS / MURS frequencies for use in specific neighborhoods where known. To avoid confusion with current County Comm Plans, I have not indicated a Tone for the simplex frequencies in Santa Clara and Santa Cruz Counties.
