

Safety Program Enhancements

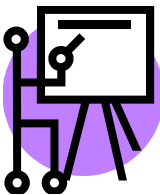

Many companies have extremely good, mature safety programs; but sometimes you are looking for that 1% improvement, to enhance existing programs. Experienced staff from A-EHS can assist you.

A complete site survey using our *SHARPER*[™] mobile software auditing tool (**S**afety & **H**ealth **A**udit; **R**esponsibility, **P**roperty & **E**nvironment **R**eporter) allows us to rapidly identify and summarize those gaps or deficiencies in your existing programs that need additional emphasis or attention.

After an expert review of those operations or conditions that may be unique to your industry, specialized safety policies and procedures can be set up. In addition, customized programs related to such topics as flammable liquids, protective equipment, or confined spaces and the like can be implemented at the site, to ensure that critical compliance items are not overlooked.

One item often missed, is the training provided to a Safety Committee. A-EHS professionals can provide education to your committee members, employing classroom lessons, hands-on techniques and our *VISTA*[™] (**V**irtual **S**afety **T**raining **A**wareness) instruction method. This way, when a safety committee does a review of an area, you can rest assured that they are less likely to overlook important items. And team members certainly appreciate the extra training and attention to detail they receive.

To increase your overall safety awareness, and to improve your safety culture, A-EHS can set up other custom safety or training programs, depending on your specific needs. This might be something as basic as additional training or group exercises, or something more detailed.

If your program is ready for it, we would suggest implementing the *S-O-S*[™] (**S**peaking **O**ut on **S**afety) program, a revolutionary behavior-based safety program that does not look or feel like a typical behavior-based program!

Whatever you require, rest assured that A-EHS staff have the education, experience, and expertise to help you nurture your improvements.
