

# PNEUMATIC CONTROL PNEUS

From the Desk of Brenda Kogan

## APPLICATION SPOTLIGHT: COMPLETE VALVING SYSTEMS

Complete systems are highly desirable across many markets. Companies and customers alike are all looking for the easiest solution to their existing issues, and complete, drop-in product systems can fill that void with ease. A complete unit can save an end user time, money, and frustration.

Bimba | Pneumatic Controls Group can create and supply a wide variety of custom complete systems, such as a valve and FRL set-up that was requested by a customer. The customer was assembling their own push-button block in-house and attaching an FRL before installing. To improve their margins and downtime, Bimba | PCG assembled a custom, drop-in system using Pneumadyne and MFD products, utilizing our wide range of product options and expertise to craft an ideal solution.

### Custom Capabilities:

- Custom fittings
- Custom manifolds
- Custom valves
- Custom assemblies

### Industries:

- OEM Industrial Equipment
- Food Processing
- Printing and Converting
- Medical Equipment
- General Manufacturing
