

Choosing the **right** partner for your phase 3 clinical trial

Are you in the final phases of a clinical trial and considering a partnership with an external clinical monitoring service?

HeartcoR Solutions can help. Let us tell you why a third-party company can be beneficial for clinical projects. With HeartcoR, you have access to our full ECG Core Lab capabilities, not just a device. We also provide the staff, training, and analytics to keep your project on track.

Easily monitor and record data remotely

HeartcoR provides diagnostic cardiac monitoring services, ECG analysis, and technologies including 3-lead and 12-lead Holter and post-event monitoring through our 3-in-1 device. Our cardiac event-monitoring technologies require minimal investigator/patient education and training and offer cloud-based data transfer and analysis, which improves satisfaction and efficiency for studies with a large number of participants.

Simplify clinical project management

HeartcoR successfully coordinates and executes regulated, investigational projects with sites **across the United States and around the world**. Our clinical project management capabilities include data collection and analysis, custom study programming and reporting, site training and subject support, and custom web portal access. Our partners include industry-leading medical device, diagnostic, and pharmaceutical trial sponsors.

Securely collect and analyze data

Our team of experts works with millions of data points and systems for leading diagnostic patient monitoring organizations. Our health information technology and diagnostic data management provide a secure, cloud-based system with rapid data transfer to HeartcoR's centralized lab, **where investigators can access data anytime, anywhere**.

5 things you need to know about HeartcoR Solutions

HeartcoR Solutions is a preferred ECG Core Lab partner for life sciences companies, health systems and specialists, and academic research centers. We simplify the clinical research process and help you achieve optimal outcomes through our:

1. **Body-worn, wireless, leading-edge technology.** We provide superior, cutting-edge technology and cloud-based data analysis for cardiac monitoring with our 3-in-1 device.
2. **Secure, cloud-based, digital platform.** Our one-of-a-kind, fully digital platform and portal meet the most stringent security standards so neither you nor your study participants have to worry.
3. **Expert staff and industry leadership.** At HeartcoR, we speak your language. We have demonstrated success in defining customer needs and developing creative, innovative cardiac monitoring devices.
4. **Customer-centered approach.** Because HeartcoR isn't the biggest ECG Core Lab you'll find, we can give your team and your study the attention you need and deserve.
5. **Third-party objectivity and balance.** There are several advantages to working with an ECG Core Lab: We're independent. We're objective. We follow a system of checks and balances that ensures the validity of your outcomes.

Research services and comprehensive operations

HeartcoR offers the following services and operational capabilities that improve clinical project management and patient monitoring:

24/7 subject monitoring

Data collection and analysis

Retrospective analysis

Custom study programming and data reporting

Electronic site and subject enrollment support

Experienced research RNs and certified technicians

Board-certified cardiologist overhead and consultation

Site training and subject support

Custom web portal access

Complete equipment provisioning and logistics

Proven IT and commercial infrastructure

EDC integration and partnerships

Independently audited, regulatory compliance and QA

Call or email us today. Let us give you a demonstration of our capabilities and share outcomes from current partners.
