

## ZIPPER CLOSING WHEEL

COMPACTION REDUCING CLOSING WHEELS

### KEY BENEFITS:

- Moves Soil with Minimum Compaction
- Designed To Break Up Soil Without Being Too Aggressive
- 1" SPIKES WON'T GET TOO CLOSE TO THE SEED**
- Angle Design Doesn't Throw Out Soil
- On Hot Windy Days the Trench Will Not Crack Open
- As the Zipper closes it creates indentations which allow moisture to sink in.
- In Our Field Studies This Wheel Outperformed All Other Closing Wheels.

**CAST WHEEL DESIGN WITH THE NARROW BAND WILL MINIMIZE SOIL BUILDUP IN BETWEEN SPIKES!**

**OVER 3000 PAIRS SOLD!**

## Mohawk CLOSING WHEEL

COMPACTION REDUCING CLOSING WHEELS

### KEY BENEFITS:

The non-aggressive, 1" angled blunt spikes on the Mohawk **feather the soil** in the furrow while simultaneously applying light pressure to ensure the furrow is stitched shut.

**GREAT FOR HIGH-SPEED PLANTING!**

Over the last two years multiple on-farm tests have been conducted comparing the Germinator® closing wheel with its patent pending "inner-rim-shoulder-firmer" to competitors such as Furrow Cruiser and Twister. In every challenge, Germinator® showed the best success at closing the furrow, providing high quality seed-to-soil contact, even emergence; closing down the competition. Germinator® creates a vein of firm soil encasing the seed in perfect soil contact and enhancing the soil's ability to wick moisture to nourish and germinate the seed.

Copperhead AG's Furrow Cruiser planter closing wheels have solved the sidewall compaction problem that came with the development of the double-disk opening system on all modern planters. The Furrow Cruiser planter closing wheels combine a wide wheel with spiked teeth to provide simultaneous firming and crumbling on both sides of the seed trench. This innovative design is also optimized to clean out well, ensuring that the planter can continue to run even in oversaturated soil.

**Fits:**

- JD 1700, DB and Max Emerge Series
- Kinze 1993 and Newer
- White 6000, 8000 and 9000 Series
- Great Plains
- Monosem
- Horsch
- Case IH SDX No-Till Drills

## YETTER TWISTER CLOSING WHEELS

**6200-006 RING SET**  
\$ 129 PER PAIR SALE

Achieve seed trench closure and break up sidewall compaction with the 6200 Twister Closing Wheel. A rounded center-ring design maintains the depth of the twisted spikes and makes it effective in a wide range of soil conditions. The Twister Closing Wheel works in wide range of tillage practices: minimum till, conventional, strip-till, vertical tillage, and no-till.

**6200-005 WHEEL SET**  
\$ 209 PER PAIR SALE

**Features:**

- Wheel utilizes twisted poly spike and rounded center
- Closes the disc opening in both wet and ideal conditions
- Ring design maintains wheel depth
- Available with full wheel assembly or as ring-only insert option for installation of factory wheels
- Made with ultra-high molecular weight (UHMW) plastic material
- Enhances seed-to-soil contact and helps prevent yield-robbing air pockets
- Eliminates potential for sidewall compaction
- 16 teeth per wheel

**SPECS**

- Outer wheel diameter: 14"
- Rounded ring diameter: 11 1/2"
- Weight: 8.35 lbs. per set (complete wheel assembly)
- Weight: 2.2 lbs. per set (ring-only insert)

## CURVETINE CLOSING WHEELS

The CURVETINE CLOSING WHEEL “chips-in” the sidewall compaction often produced by the vee-opener blades. It crumbles the soil and promotes lateral root penetration. The pronounced curve allows the tine to ease out of the ground without ejecting material like a straight tooth closing wheel. The thumb-like tooth will firm and provide seed-to-soil contact. This makes moisture available and prevents the appearance of air pockets around the seed.

| MODEL # | APPLICATION                              | PRICE PER PAIR |

| 102598C | GAUGE TINE WHEEL ONLY                    | \$ 85.00 SALE  |

Great For Planting In Cover Crops!

# Martin-Till

## MARTIN SPADING WHEELS

The Spading-Closing Wheel moves soil toward the seed at planting depth, while lifting and fracturing the surface layer to achieve compaction-free closing of the seed trench in wet, hard or sod conditions. With soil firmed around the seed from each side and the surface layer loosened, crops emerge sooner and planting can be done at the proper depth, even in wetter conditions, without fear of crushing the soil above the seed which would prevent emergence.
