

## Training

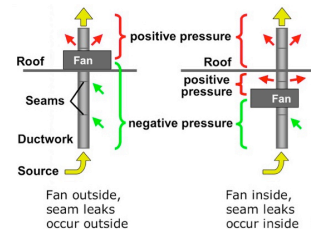

Training is more of an art than a science, and A-EHS' lead instructor - Mark Rollins, has a background in both.

He has spent decades developing and presenting training on dozens of diverse topics, literally hundreds of times to different internal audiences. He has also spoken as a professional before peers at various conferences, and organizations such as NASA. Mark is also a published artist, and lends his expertise creating technically accurate representations - for as you know a picture is worth a thousand words.

Whether it is taking an existing program and polishing it a bit, to creating a new training suite from scratch, either can be done with equal aplomb.

More importantly, at A-EHS, we don't sell you more than you need. For example, a site shipping hazardous waste does not need an expensive two-day RCRA / DOT session to be in full compliance. And we are highly confident that if you need training for minor chemical spill cleanup, a 40-hour HAZWOPER class is not what you are looking for.

Presentation can be created in almost any format, for just about any EH&S and Risk Management topic, and delivered in-person or as a Webinar.
