

What is a lawn renovation/repair?

A lawn renovation can mean a total kill all of the existing vegetation due to the fact that there are far more weeds than there is healthy grass. This means that we would come in and spray a total kill herbicide to eliminate all lawn vegetation on one visit.

We would then follow up by either removing the dead material or begin planting grass to establish a new healthy lawn. This may include slit seeding or aeration to break up the soil and then over seed. Sometimes it's just easier and more cost effective to start over than to try to repair the existing lawn.

Lawn repair can be areas of the property that have a hard time growing lawn, areas that have had insect damage, bare areas etc. We will come out and assess what the issue is and find the best solution. This may include adding topsoil, aeration, overseeding or installing sod.
