

Carpet Stretching

It's not difficult to patch a carpet, but if you want it to look right, that's where a professional comes into play. We offer a flawless job by a certified Carpet repair Technician.

All our Carpet re-stretching is done with a power stretcher. This gets the job done right. People ask why their carpets get loose. Many think it's the pets or the kids running around the house. Some blame it on furniture moving. In my experience ripples can show up as soon as 3 years after original installation. The cause can be the backing on the carpet expanding and /or relaxing or the original installation was not completed using a power stretcher. After a power stretch, the carpet should not have to be re-stretched again.

If there is water damage, the pad soaks up water like a sponge making it next to impossible to dry. The best thing to do is when you have water damage, have the soaked pad removed, allowing the carpet to dry then have new padding replaced and the carpet re-stretched. We specialize in all these areas.

- Certified in repair and installation
- Tack strip and pad installation
- Animal tear, iron burns, bleach spots
- Carpet to Tile re-tack
- Re-stretch wrinkles
- Seam repair
