The mission of the ACTS Vivitrol Program is to provide intervention and treatment services in the arena of substance abuse and co-occurring disorders that are effective and medically safe for the individual who is in need of treatment. Our mission is to also educate the individual on the nature of chemical dependency and its effects on their lives and to assist in the recovery process so they can regain self-sufficiency.

Vivitrol Medication Assistance Program

What is Vivitrol?

Vivitrol is one of the newest medications available and can treat both opiate and alcohol addiction. It blocks other opioids from acting on the receptors in the brain and can also help ease drug cravings. By blocking the effects of other opioids it takes away the pleasurable effect, which can help with preventing relapse. This treatment can help you stop misusing opioids and alcohol and, when combined with counseling, can help you get one step closer to recovery.

Is Vivitrol addictive?

Because Vivitrol is a non-opioid, an antagonist, it is not addictive nor does dependence on the medication develop.

Program Goals and Objectives

- To develop and improve daily living skills to promote a healthy drug free lifestyle.
- To learn warning signs of relapse and develop a relapse prevention plan.
- To learn more effective ways of coping with life.
- To enhance self-esteem and self-motivation.
- Deliver professional, efficient, motivating & supportive customer service.
