Subj: fbi amerithrax tip submitted on 11 JUL 04

Please have an FBI agent contact me concerning:

1. My 17 SEPT 01 communiques from the White House Office (Karl Rove's secretary), one day before the anthrax mailings, as well as his memo to the DoD in the spring of 2001 that the anthrax vaccine was a "political problem."
2. Information about the warning of antibiotics in the attack letters, a protection not commonly known at that juncture in medical awareness as a fully protective measure against inhaled anthrax spores other than by US Army experts. Additionally, US Army involvement in the only other anthrax epidemic in the past 100 years in Manchester, NH in '57.
3. Sen. Daschle's investigation of the Anthrax Vaccine program, which began in the summer of 2001, but was effectively halted by the anthrax attacks on his office as US Army officers offered the very protection he was investigating.

R,

Major Tom Rempfer
