

#1 selling remote for healthcare

99% CLEANER

Problem

- TV Remote Controls are one of the most often touched objects in a patient's room.
- Remote Controls are one of the most contaminated surfaces in a patient's room. Remotes have often been tested to carry MRSA and other dangerous bacteria.
- Standard TV remotes are impossible to clean properly due to crevices and openings

Solution – Clean Remote

- Clean Remote flat nonporous surface is easily disinfected.
- Clinically tested to carry 99% less bacteria than all other remotes tested.
- An invaluable tool in the battle against the spread of infection
