# Kyocera Helps School District
# By Providing a Better Way to Manage Output

**THE SITUATION –** A K-12 school district was experiencing significant administrative traffic and generating a considerable number of documents. As a result, keeping track of print users and costs can be an unwieldy and confusing task. The school district was seeking to upgrade their print management solution to include secure printing and a way to better manage their print output.

**THE CHALLENGE & THE SOLUTION –** The school district expressed their concerns to the Kyocera dealer. The dealer decided to present **Kyocera's CentraQ®** to address print security. CentraQ helps to minimize the risk of unauthorized access to confidential documents left at the device. But what really caught the attention of the client was CentraQ's secure print release capabilities; more specifically, CentraQ's ability to allow the user to release their print job from any Kyocera device on their network – giving teachers and administrators the flexibility to use another device if their default one is occupied. Through CentraQ, the school had a cost effective, feature-rich, MFP-embedded alternative to a more expensive third-party solution.

The client was equally impressed with Kyocera Net Viewer network device management software. Net Viewer allows users to easily manage their fleet of MFPs and users via Job Accounting, as well as import user addresses from a single CSV file.

The competition could not match what Kyocera offered, and the client was on board with the dealer recommendations, specifically, a mix of **33 TASKalfa A3 and ECOSYS A4** devices with CentraQ, Job Accounting and Kyocera Net Viewer.

**THE RESULTS –** The combination of Kyocera business applications gave the school district an easy-to-use, cost-effective embedded solution for secure print release, a means to monitor print and copy cost per user, and a way to manage their Kyocera MFP fleet. The client appreciated Kyocera's Net View's rich feature set, especially the ability to manage their MFP fleet and monitor print and copy usage per user within one easy-to-use console.

**THE BENEFITS –** The impact on the client's environment was immediate. The client has the peace of mind that comes with print security, and can now better manage document output across the district and control user costs. This in turn, helps the client stay on budget.
