RISING ENERGY PRICES RAISES CONSUMER INFLATION 1.4%; CORE RATE UP 1.6%

Prices of consumer goods and services — the cost of living — rose 1.4% in December, the fastest clip since last summer as Americans paid more to fill up their gas tanks.

Before the pandemic began last spring, consumer inflation was running at a much higher 2.3% pace. The cost of gasoline jumped a seasonally adjusted 8.4% in December, though the actual increase to consumers was much smaller.

In any case, gasoline prices are still 15% below year-ago levels. People are staying home and driving less during the pandemic and there's not as much demand for fuel.

ECONOMIC UPDATE AND ANALYSIS

The cost of food — groceries and eating out — increased 0.4% last month.

If gas and food are excluded, the rate of inflation rose a smaller 0.1%, in December based on a less volatile "core" measure of prices. The core rate of inflation over the past year was unchanged at 1.6% for the third month in a row.

STRATEGICALLY FOR CREDIT UNIONS

Although rising energy and food costs have pressured headline inflation moderately higher, the underlying trend remains stable. Inflation is likely to hover below 2% through the early spring and probably won't pose a threat to the economy this year or next.

The bigger question is whether it will reach the Federal Reserve's 2% target — and stay there. The Fed has said it's willing to let inflation run above 2% for awhile until the economy has returned to normal.

Prices of other important consumer goods and services were mixed. Rents rose and the cost of clothing increased sharply, for instance, but prices for used vehicles, medical care, drugs and recreation all declined. This bodes well for the outlook on consumer spending behavior and disposable income.

The rate of wholesale inflation in the past 12 months was unchanged at 0.8%. The index was growing at a yearly pace of 2% in January shortly before the coronavirus epidemic erupted. This appears to reverse a nearly 12 year period where the pace of wholesale inflation has been less than consumer inflation.

The result is that wholesale producers are able to better absorb any rise in production prices to the consumer.
