

TWO TONE

Express your inner color.

Luraline Lighting has a secret. We never meant it to be a secret but somehow it became one anyway. The secret is, some of our fixtures can be ordered with two-tone paint.

That's one color on the outside of the fixture and a different color on the inside. Of course this only pertains to those fixtures that have the inside part of the fixture exposed for public view. This would include RLMs, Cylinders, and Helos.

Just imagine the possibilities. You could match the colors of professional sports teams or colleges. You might want to incorporate a company's branded colors. Maybe you want to create a specific ambiance or mood. All this is possible with the Two Tone Treatment from Luraline Lighting.

To Order Two Tone Fixtures

When specifying your fixture, look for the CIC (Custom Inner Color) ordering code. Select it and specify which is your inner color, and which is outside. Choose any two colors from Black, White, Silver, or color numbers 1000-8028 in the RAL palette.
