The Singer’s Daily Practice Journal

Volume II: A graded introduction to diction and musicianship using excerpts from Italian, German, and French art song repertoire

Cheri Montgomery
Preface

The sounds of English, Italian, German, and French are ideal for discovering a vibrant tone. This text pairs vocal training with musicianship, phrasing, and language study. Enunciation rules are presented using the International Phonetic Alphabet. The concepts needed to develop musicianship skills are introduced using excerpts from standard art song repertoire. These topics are presented simultaneously and in a graded order.

Volume II is intended for singers who wish to pursue formal voice training but lack adequate musical background. Many are unaware that they possess a special vocal ability until they reach adulthood. Then they find themselves searching for a voice teacher before gaining the musicianship skills needed to learn standard repertoire. Art song assignments are indispensable teaching tools. Attributes of the Italian, German, and French languages are ideal for optimizing the vibrancy of vowels, energizing the articulation of consonants, and enhancing the legato. With this text, the voice teacher can confidently proceed with lessons and assignments while the student studies diction and musicianship independently. The teacher can monitor progress by requiring the student to play or sing a randomly selected excerpt from the daily assignment pages.

Both volumes of The Singer’s Daily Practice Journal combine textbook, workbook, and journal in one resource for voice students. Each section of the 15-week journal begins with manuscript paper for recording weekly lesson notes, exercises, and assignments. A grading rubric of vocal concepts is included. This gives the teacher a concise way of defining vocal development and communicating expectations. The rubric offers a less personal platform for critical assessment. Space is provided for the student to record progress and log daily practice times. A glossary of terms is included. Spoken and sung examples of all phonetic symbols are available on the listening page at www.stmpublishers.com.

This text was written by a singer for singers. It is my hope that gifted students will gain the musicianship and diction skills needed to successfully pursue vocal study.

The International Phonetic Alphabet

The International Phonetic Alphabet was established by the International Phonetic Association around 1888. Each symbol stands for one sound. Brackets enclose the symbols of a word or phrase. Precise pronunciation of each symbol must be defined within the respective language.

English, Italian, German, and French Transcription

The English transcription rules in this volume introduce IPA symbols that are shared with the English, Italian, German, and French languages. Specified diphthongs in American speech utilize the closed [e] and bright [a] symbols that are common to all four languages. IPA symbols with sample words are provided on the following chart. See pages 134-135 for the definitions of all symbols.

The long vowel mark [:] is not included in the following English transcription lessons since vowel length is implied within American English speech patterns. Vowel length indications are crucial for Italian and German transcription. A deliberate lengthening of the vowel is characteristic of both the spoken and lyric forms. French also maintains a deliberate lengthening of the vowel within the phrase but length is not typically indicated. Other IPA symbols include the primary stress mark ['] and secondary stress mark [,]. Stress marks precede the stressed syllable in the IPA. Stress is not indicated in French transcription since vowel length (the quality of the stressed syllable in French) is systematically implied within the pronunciation of the language.

Introduction to English Transcription

Silent vowels are not transcribed. A final e is often silent in English. For example, the four-letter word love [la:v] is transcribed with three symbols to represent the three sounds that are actually pronounced. Single vowels may have more than one sound. The i of like [la:i] is transcribed with the two IPA symbols that represent the sounds actually pronounced. Sometimes a vowel cluster makes one sound as in the word tree [tri]. Silent consonants are not transcribed. The l of could [kould] is silent. Double consonants are represented with a single symbol as in the word call [kɔl]. The schwa [ə] stands for an undefined sound in an unstressed syllable. Pronunciation must be defined for each language.

Introduction to Reading Music

There are four fundamental questions singers must ask themselves before attempting to read a line of music:

1. What is the key signature of the melody?
2. What degree of the scale does the melody begin on?
3. How many beats are in each measure?
4. What note value receives the beat?

The following lessons help singers answer these questions. A sample exercise is below. Follow this process when completing the daily work:

1. Fill in blanks (abbreviations: \( M = \) major, \( m = \) minor, \( D = \) degree)
2. Be reminded of the key signature by drawing a red line over the sharpened or flatted lines and spaces in each octave (see arrows)
3. Play and sing a scale in the key of the example
4. Repeat the scale stopping on the first note of the phrase
5. Play the melody on the piano
6. Sing the melody on vowels with a raised palate and released jaw
7. Sing the full text with a raised palate and released jaw

Key: \( B^bM \) First note: 1st D (1st degree of scale) Beats per measure: 4 (top number) Note value of the beat: Q (quarter note, bottom number)

IPA: [ \( \text{ed in-'spi-ri ed in-'spi-rij'\text{aggje-le-'menti} } \] ]

Italian: ed inspiri ed inspiri agli elementi

Translation: and inspire and breathe into the elements

Excerpt: variation of Vaga Luna by Bellini

**Italian Note:** a composer may set two or more vowels on one note. Do not give equal time to the vowels. Even when assigned equal time, one vowel must have the feel of greater length. The long vowel will be preceded by a semiconsonant or followed by a long mark in the IPA.

**Excerpts:** musical examples in the following lessons were designed to introduce rhythms, intervals, and the sounds of the Italian, German, and French languages in a graded order. For this reason, the examples are newly composed or variations of excerpts from standard repertoire. Excerpts from standard repertoire are included whenever possible.

Week 10: Reading Fifths, German Ich-Laut, Ach-Laut, and Diphthongs

Day 1: Identifying Fifths

Day 2: German Ich-Laut, Ach-Laut, and [ae] with Ascending Fifths

Day 3: German Ich-Laut, Ach-Laut, and [ae] with Descending Fifths

Day 5: German Ich-Laut, Ach-Laut, and [œ] with Fifths

Day 6: German Ich-Laut, Ach-Laut, and [œ] with Fifths
Identifying Fifths

Notes that are a fifth apart move from line to line or space to space, skipping a line or space in between. Circle the fifths in the example:

Week 10, Day 1

German Diction Note: The prescribed pronunciation of diphthongs in this unit adheres to standard textbook instruction. Do not substitute an English pronunciation of the diphthongs. Contrast the following pairs:

**Glossary**

**Chiaroscuro.** (Italian: bright/dark) Describes a desirable tone quality for singing that is both brilliant and rich.

**Choir.** A choir is a group of singers. The word is generally used to indicate such a group in a church. [Naxos]

**Chorale.** 1. A Lutheran hymn melody. 2. A hymn with 4-part harmonization.

**Chord.** The simultaneous sounding of two or more notes.

**Chorus.** 1. A part of a song which is repeated after each verse. 2. A large organized group of singers, especially one which performs with an orchestra or opera company. [Oxford]

**Chromaticism.** 1. Movement by half-steps. 2. A composition that uses pitches beyond a centralized key.

**Classical.** In the most general meaning of the word, classical music may designate fine music or serious music. More technically the word may refer to a period in the history of music, roughly from 1750 to 1830. [Naxos]

**Clef.** A symbol at the beginning of the staff that indicates which lines and spaces represent the particular notes.

**Closed vowel.** Refers to a vowel with an arched tongue thus reducing the space between the articulators.

**Coda.** A tail; a closing section to a movement.

**Coloratura.** Rapid, melismatic singing.

**Concert master.** The first violinist in an orchestra.

**Concerto.** A composition written for a soloist and orchestra.

**Conductor.** One who directs a group of musicians indicating the tempo, phrasing, dynamics, and style of the music being performed.

**Consonance.** Groups of tones that are pleasing when sounded in harmony.

**Consonant.** A basic speech sound in which the breath is at least partly obstructed and which can be combined with a vowel to form a syllable. [Oxford]

**Continuant.** A consonant which is sounded with the vocal tract only partly closed, allowing the breath to pass through and the sound to be prolonged (as with f, l, m, n, r, s, v). [Oxford]

**Contralto.** The lowest female singing voice.

**Countertenor.** A man with a singing voice that is higher than usual for a tenor and similar to a low female voice. [Cambridge]

**Crescendo.** A gradual increase in loudness in a piece of music. [Oxford]

**Cricoid cartilage.** The ring-shaped cartilage of the larynx. [Oxford]

**Croon.** To sing or hum in a soft, low, and soothing voice. [Webster]

**Da capo.** (Italian: to the head). To return to the beginning of a piece of music.

**Deceptive cadence.** A chord progression that does not lead to a resolution.
