RE: SCA#2 Ash Landfill
Closure Plan

Dear Rusty,

I have prepared the SCA #2 Ash Landfill Closure Plan dated October 12, 2016. This plan has been prepared in accordance with the requirements of 40 CFR Section 257.102 for an existing CCR landfill.

The plan is designed to

- Control, minimize or eliminate, to the maximum extent feasible, post-closure infiltration liquids into the ash material and releases of CCR, leachate or contaminated run-off to the ground water, surface water or to the atmosphere;
- Preclude the probability of future impoundment of water, sediment or slurry;
- Include measures that provide for major slope stability to prevent the sloughing or movement of the final cover system during the closure and post closure care period;
- Minimize the need for further maintenance of the landfill; and
- Be completed in the shortest amount of time consistent with recognized and generally accepted good engineering practices.

Sincerely,

S. Scott Carlson, PE. PLS
Twin Peaks P.C.
