18	340		

PROCEDURE TO SET TOOL POSITIONS

The carousel has 18 positions; each position has a Y & Z location.

The locations are stored in subroutine 1515 located in OEM Subroutines.

To set the locations use a setting ring as shown in drawing RTC-21044

In JOG mode move the spindle to it's Z max position and X max position.

In MDI mode enter M22 to open the tool door and then M24 to extend the tool carousel.

Then enter A0 to move to position 1.

In JOG mode place the setting ring on a tool holder and place in position 1.

Using the handwheel move the spindle (with no holder in place) above the tool in the holder.

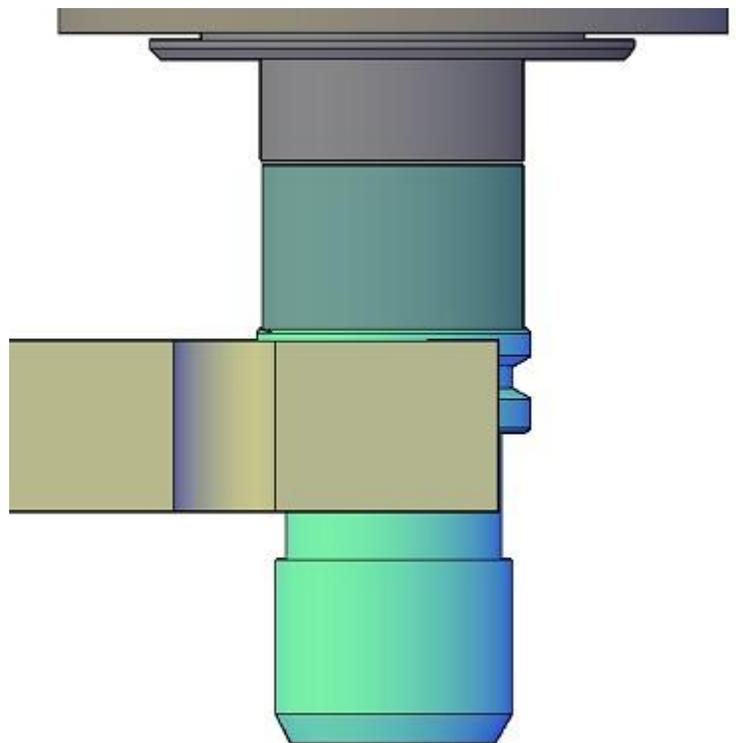

Carefully align the spindle in Y & Z until the Spindle nose is aligned to the tool holder set ring.

Ensure that G53 is active with D0 (no tool offset)

Write down the Y & Z screen values in the attached table.

Repeat for all 18 positions.

Make sure you include if the number is positive or negative (+ / -).

TOOL SUBROUTINE 1515

Edit the highlighted code to match your tool location table.

```
(SUB1515) ; TOOLCHANGER POSITIONS
;          POSITION      Y POS      Z POS
(IF P2181 EQ 01 P2187 = 3.15,P2188=-17.33) ; Position 1
(IF P2181 EQ 02 P2187 = 2.30,P2188=-16.33) ; Position 2
(IF P2181 EQ 03 P2187 =-0.95,P2188=-16.63) ; Position 3
(IF P2181 EQ 04 P2187 =-0.35,P2188=-16.63) ; Position 4
