BARRACUDA OIL TOOLS, LLC

CENTRALIZER & STABILIZER

Both Integral Solid-Fin Stabilizer and Clamp-On Bow-Spring Centralizer configurations are available for specific applications.

For Stabilizer applications the thread connections are matched to the work string, and the rigid fin working range matched to the bottomhole assembly for optimal protection.

For Centralizer applications the assembly is clamped onto the work string with welded flexible bow springs allowing the bottomhole assembly to pass through restrictions, while maintaining optimal protection to sensitive components such as inflatable packer elements. 30" to 40" long relaxed lengths are available.

FEATURES

- Simple design
- Wide working range
- Matched to specific bottomhole assemblies for optimal protection
