

**MIRAFLEX WELCOMES YOU**

**MIRAFLEX<sup>®</sup>**  
**FLEXIBLE & SAFE**  
**MADE IN ITALY**

## Welcome to the Miraflex Product Line Catalog

Again, Miraflex would like to take this opportunity to say, "Thank You" to the parents, opticians and all the eye care professionals who believed from the beginning in this unique product for young children. Boldly you trail blazed into novelty, not knowing what to expect but were willing to try something unconventional. We are indebted to the ECP's that transmitted children's safety, comfort and regular consistent usage more value than cosmetic presentation.

Thank you for your support that has made Miraflex recipients of several awards at Vision Expo throughout the years. We are humbled and honored by the ECP's vote and take this moment to let you know how we appreciate it, year after year. Thank you!!

Your valuable comments land on listening ears and in this edition, you will see new products based on your instance. Inside you will find the Eva, (43/15) a sporty shaped frame for older kids, the NB4 (47/17) a rectangular frame, and the N50 (50/19) for adults. The N52 (52/19) will be phased out and will soon be replaced with the N53 (53/19) in the Winter of 2015.

Miraflex continues giving-back working with several organizations here at home dedicated to research and investigation as well as humanitarian help in pediatric eye care. Thank you for allowing us to be the conduit between the end users and the scientists, and end users and social workers. With your continued patronage, we can continue to help the scientific and humanitarian communities.

I thank the teams that make this company a blissful reality by allowing us to cooperate with many organizations throughout the world. Our Florida Team headed by John Benabe is working in converting our customers into loyal customers and then into "raving fans". The customer care team, who enthusiastically takes your calls, fulfills your orders, many thanks and the warehouse team who pick and send your packages, all working together in a smooth process, trying to keep our costs down, thank you. To the Italian manufacturing team, managing the cost increases in raw materials, and labor, thank you for stepping up efficiency to have a minimal impact on our costs, much appreciation. To the Colombian Head Office that ruthlessly strives for product innovation focusing on children's vision and development, we thank you. The Quality Control, Clean Up, Band Manufacturing and Shipping and Receiving Teams, your role is equally recognized.

Thank you to all past employees for their contribution in building this company and to our future contributors, for their innovation and positive attitude. Unconditionally Miraflex, thanks you, the readers and Eye Care Professionals for your belief, suggestions and recommendations the push us to evolve, grow and reach out to our communities.

From Gratitude,  
Peter Montana  
and the entire Miraflex Family

## Instruction for Molding and Setting Lenses

- Use thin lens for high-powered + Rx
- Warm frame and insert from inside of frame. Cool frame to get a snug fit.
- When cutting lenses, use provided frame measurements to ensure correct size and fit of lenses in frame. Lenses can be cut 1-2 mm larger in the C Measurement if necessary to ensure a tight fit.
- Stronger Rx please use blunt center bevel (Fig.1)
- Always use the Bridge rings when storing the frames. Enforce 90° angle between frontal and temple pieces by folding at the hinge. Fold temple tip
