Ordering Information:

- Easy Step stairs feature a 24" wide step that sits 7" from the bin wall.
- Easy Step sidewall stairs fit bins from 24' to 75' in diameter.
- For adjacent bins sharing one platform, space bin walls 38" apart, if using a twin platform space 64" apart. For larger spans refer to page 7 for the use of the Easy Step Filler Platform, ES3748.
- Easy Step Platform sits 12" below the eave.
- To calculate parts needed, order 1 Stair Platform with Stair Assembly (ES35xx) for the top ring of your bin, and 1 Stair Section for each remaining ring (ESxx00).
- To use an Intermediate Platform, substitute an Intermediate Platform and Stair Assembly for 1 Stair Section (ES36xx).
- Does not meet OSHA regulation 1910.25(C)(3)
- Example: On an 8-ring 44" sheet bin with an Intermediate Platform, use 1-ES3544, 1-ES3644, and 6-ES4400.

14400 Stair Section

38000 Ladder Platform, 38050 Platform Filler, 35000 Stair Platform

Ordering Information:

- Original Sidewall Stairs feature a 20" wide step that sits 6" from the bin wall.
- Original Sidewall Stair packages fit bins from 18' to 105' diameter and are not for commercial use.
- For adjacent bins sharing one platform, space bin walls 32" apart, and 54" if using a twin platform.
- On a standard bin, the stair sections used are determined by the height of the sheet. For a 32" bin sheet, use one 13200 per sheet. For the top two rings, the parts needed are determined by the desired location of the platform, using the chart below.

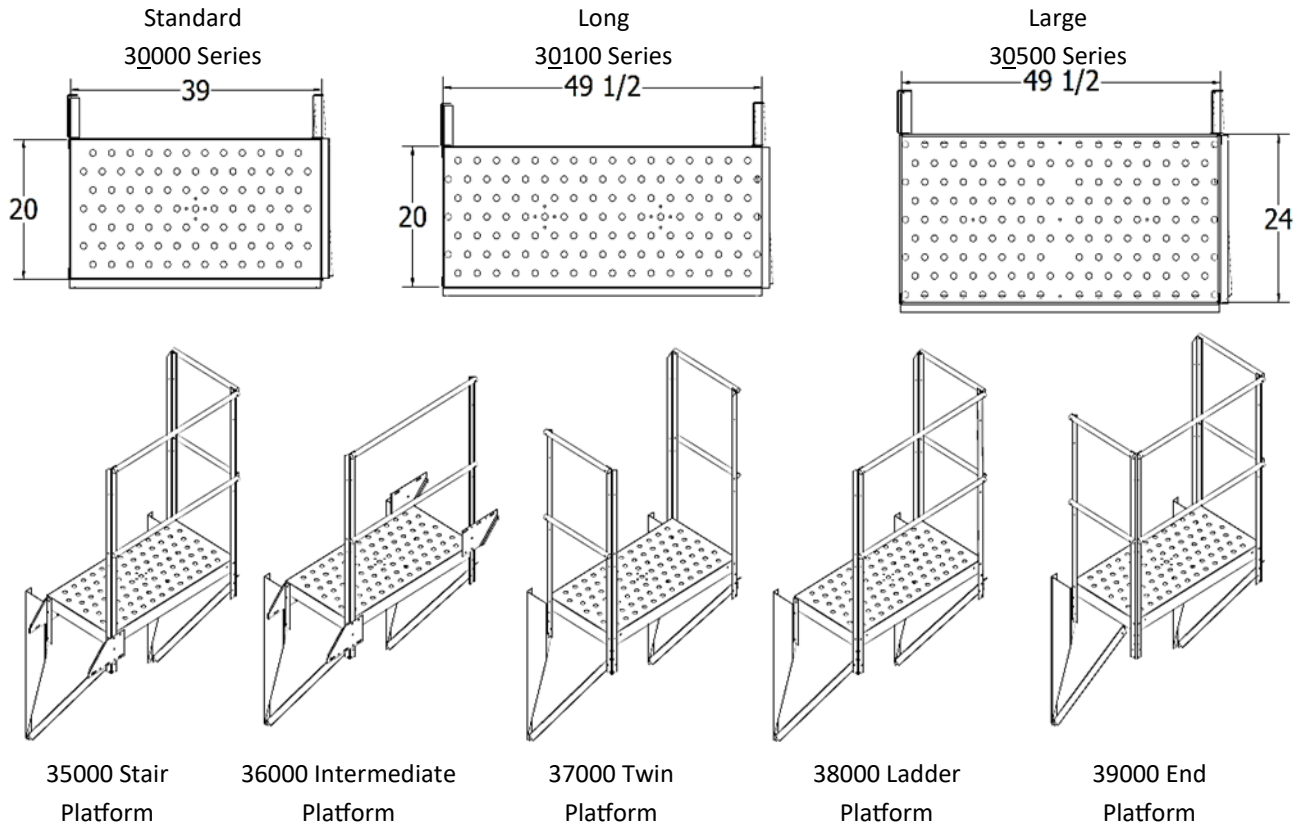

Height of rings	5 ½" below eave	16" below eave
44"	1-35000 Platform 1-13200 Section 1-14400 Section	1-35000 Platform 1-12100 Section 1-14400 Section
32"	1-35000 Platform 1-12100 Section 1-13200 Section	1-35000 Platform 1-14400 Section

Example: For an 8-ring bin with 32" sheets and a platform 16" below eave, use 1-35000 Platform, 1-14400 Stair Section, and 6-13200 Stair Sections.

A-Series Roof Deck

- The A-Series Roof Deck is designed with simplified installation in mind and allows for stair transitions that are compliant with applicable standards for safety and reliability.
- Each section is equivalent to 1' of the outside deck diameter. Example: 48' outside diameter deck is 48 Sections of ARD2480.
- Available in 3 different sizes, ranging from 12' diameter up to a straight line deck, such as on a building roof.
- Designed for roof slopes from 30° to 40°
- Arrest landings can be configured as required by local and regional safety standards to allow for rest landings in the run.
- Another benefit of the rest landings is the ability to change roof stair approach from the eave platform. An eave platform may be at 6 o'clock, but the best approach to the peak may be at 9 o'clock. The lower stair can approach the mid roof deck at 6 o'clock, walk around the deck to 9 o'clock, and proceed up the stairs to the peak of the bin.

A-Series Sidewall Deck (Eave Walkaround)

US Patent: 8,595,989

Drawing illustrates a 3 stiffened 132' bin with the skip a stiffener deck.

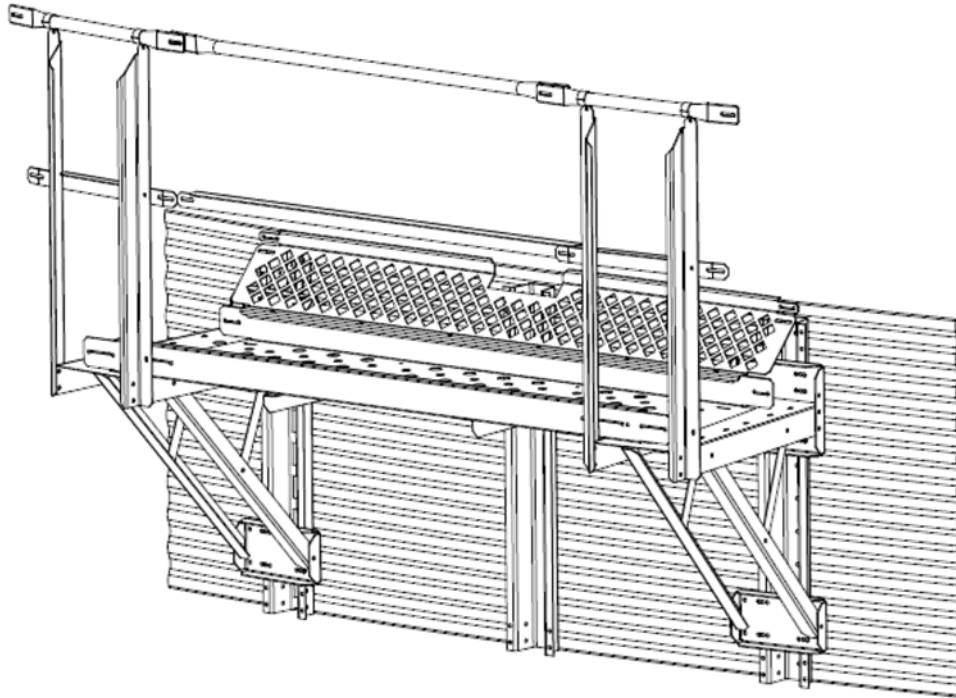

- The Sidewall Deck is available as a walkway option around the sidewall of an externally stiffened bin. It is attached by field drilling through the face of the stiffeners and attaching AWD001 mounting brackets.
- Bins with two stiffeners per sidewall panel require one mount and one deck section per stiffener.
- Bins with three stiffeners per sidewall panel below 30' in diameter require one mount and one deck section per stiffener. Three stiffened bins above 30' may utilize the skip a stiffener configuration where one mount and one deck are used for every other stiffener.
- The Sidewall Deck is load rated for 900 lbs.
- The ES8500 Series platform and ES7744 Transition Stairs are recommended for use at the manhole, roof stairs, and sidewall ladder or stairs.
- For unstiffened bins, see pgs. 7 & 8 utilizing the ladder platform and platform fillers.

MRH Roof Handrail

US Patent 8,595,990

How to Calculate Parts Needed for Mid-Roof Handrail:

Number of Sections: One Mid-Roof Handrail section (MRH001) for each foot of desired diameter.

Number of Roof Mounts: One Roof Mount (MRV_1) for each roof panel covered by the Mid-Roof Handrail. The minimum number of mounts needed is 1 per section of MRH001.

Number of Entries: One entry section (MRHE01) for each instance that you need to pass through the Mid-Roof Handrail.

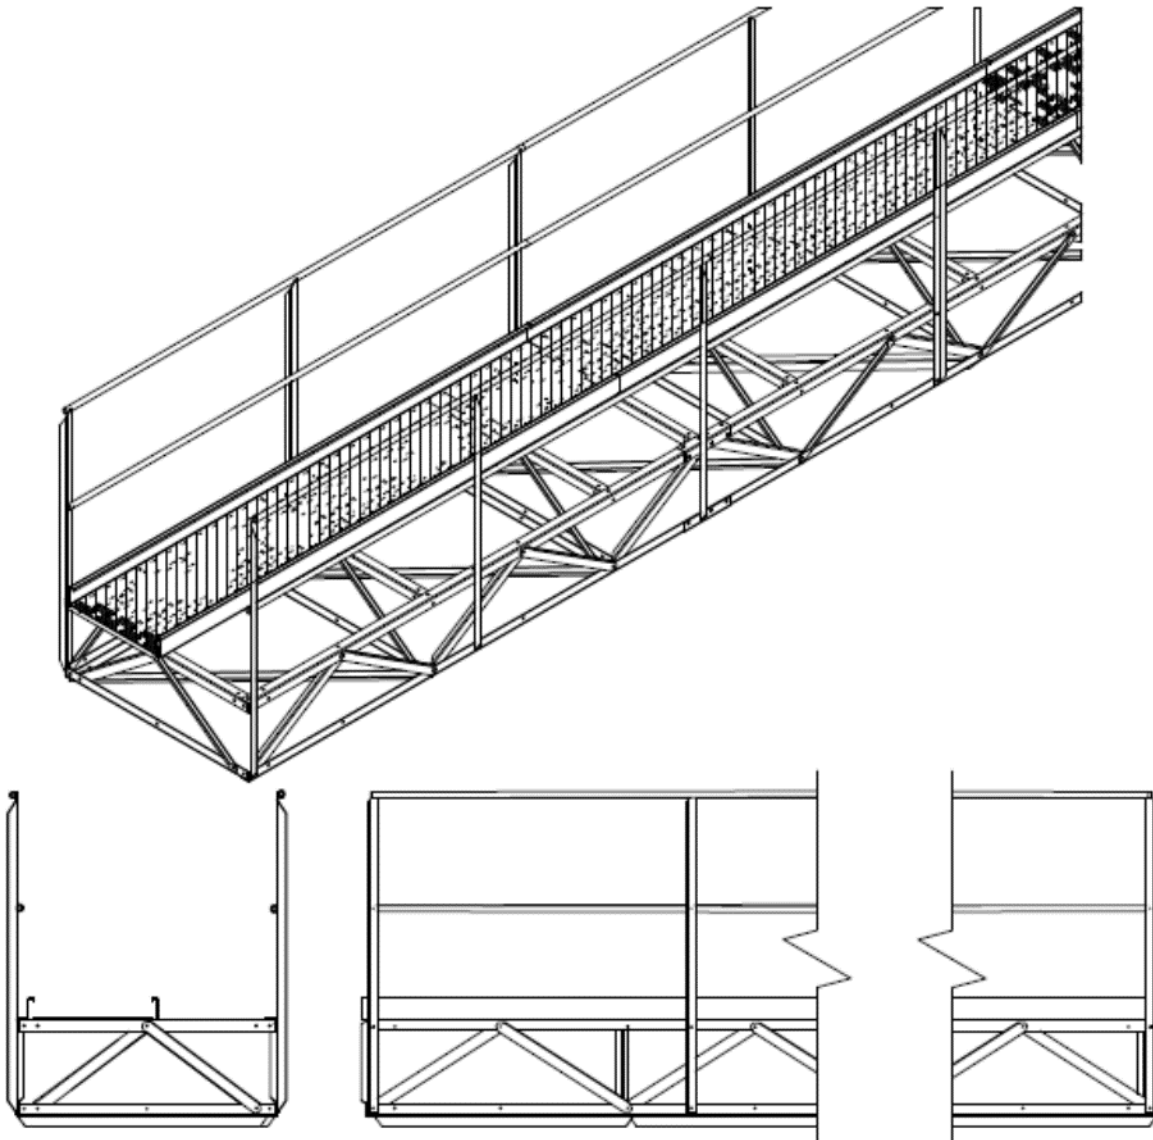

24" of roof run must be allowed outside of the handrail to allow for mounting hardware, and 36" off of the diameter.

Example: If the handrail will be placed halfway down the roof of a 60' diameter bin, the handrail diameter (inside diameter) will be 30', you order Quantity 30 MRH001. If there are 60 roof panels at the Mid-Roof Handrail roof location, order Quantity 60 MRV_1. Indicate the bin manufacturer when ordering because the mounts are brand specific to correspond to the pre-punched roof rib holes. Typically, at least 1 entry section will be required for each system.

Please call for assistance with any configuration questions.

Item	Description	List Price	Weight

Conveyor Support

Ordering Information: Manwalk pitch should not exceed 20° or 4.3":12". For steeper inclines, specify VP for variable pitch stair degree to 45°, or RS for roof stairs to 35°. Example: 69420VP or 69420 RS. No extra charge for either option. The manwalk deck of the conveyor support consumes 26" of the width of the support. 48" support has 22" of conveyor space, 42" has 16" of conveyor space, 36" has 10" of conveyor space, and the 28" is for Bridged Manwalk. Allow 2" clearance from outside to kickboard on Manwalk.
