

ATRIUM

ACCESS CONTROL

ATRIUM - innovative and accessible

Installer's Choice

AC22KITB

- Can be used standalone, web or PC based
- Access your system over the internet
- Speedy installation
- Quick and simple system start
- Straightforward and user-friendly
- Fast and easy card enrolment
- Extremely competitively priced
- Free training in our demo room
- 5 year warranty

Whether you prefer traditional hard-wiring, or are looking for a system which is fully IP, then ATRIUM is the product for you. In fact, you can “mix-n-match” with some ATRIUM controllers on a network, and some hard-wired. The system is so flexible and straightforward, that even new installers to access control will be able to confidently provide customers with a system that is user-friendly and reliable.

Simplicity

A simple and logical wiring structure, plug & play hardware, step-by-step instructions and our quick-start function allows you to get your system up and running quickly. Customer specific programming can then be completed at your convenience with the system already performing access control functions.

World-wide performance

Connect to ATRIUM’s embedded web server from any place in the world via any recent web browser, smart phone or tablet. Alternatively, you can use the free software supplied and get full functionality and reporting from your local PC at your desk. Whichever suits you, ATRIUM will keep you updated and in control of access to your building.

Flexibility

Offer your customer exactly what is required by them - local and/or remote control and monitoring, reports of user movements and transactions, restriction of access to critical areas by the authorisation level or time schedules, verification of access by connection to CCTV cameras, email notification when something is wrong....and so much more.

MAIN FEATURES	BENEFITS
100 reader capacity	Small to large site applications
10,000 cardholders	Provision for high traffic environments
Embedded web server	Fast access to system from anywhere
Free management software	Comprehensive database & reporting
1000 access levels	Control who goes where
250 schedules + holidays	Authorise access by time & dates
Email notification	Immediate alert of specified events
Cardholder reports	Who is in the building and their location
Interlock	Create a secure area between doors
IP Camera Monitoring	Visual confirmation of status
Alarm control	Automatically arm/disarm areas by card
Anti-passback	Prevents misuse of cards
Fast firmware update	Updates with system still operating

REMOTE CONTROL - wherever you are

The innovative ATRIUM embedded web server is fast, simple and secure. From any place in the world, you can manage users/cards, lock/unlock doors instantly, and view system events. Instant results are provided using any smart phone, tablet or web browser.

Check the real-time status of your doors, so you know if your building is secure or not.

If someone calls you to gain access, you can decide their validity and then open the door to allow them in - and you can watch the door status change from unlocked back to locked again.

See who is in and who isn't, what doors they have been through and at what times. Also you can check what programming changes have been made, and by which operator. You can immediately enable or disable a user, to allow or deny access depending on a given situation.

LOCAL CONTROL - whenever you want

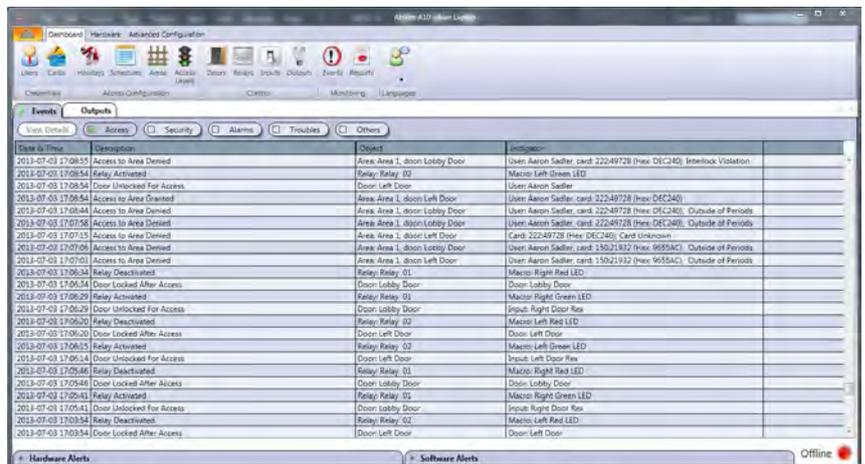

The powerful and comprehensive ATRIUM software is provided free of charge, and allows you to have full database and reporting management.

A simple user interface ensures all tasks can be executed quickly and efficiently, and designed with the user in mind.

The cardholders database will allow you to be specific with their access rights in your facility. You can check on their transactions around site, and generate reports either individually or in groups. General information can also be held in the database for convenience.

Event generation is important for you to know what has happened in the past. This information is easily presented via a simple report generator - for example, you may want to check that your contract cleaners invoices match up to their actual time on site, well that's a simple operation and it could save you money.....

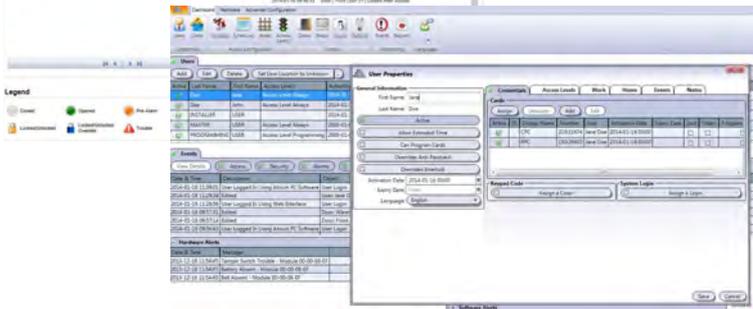

ATRIUM

ACCESS CONTROL

An excellent product for your customer.....

Connect from anywhere and monitor the site

Authorise card holders by door and time

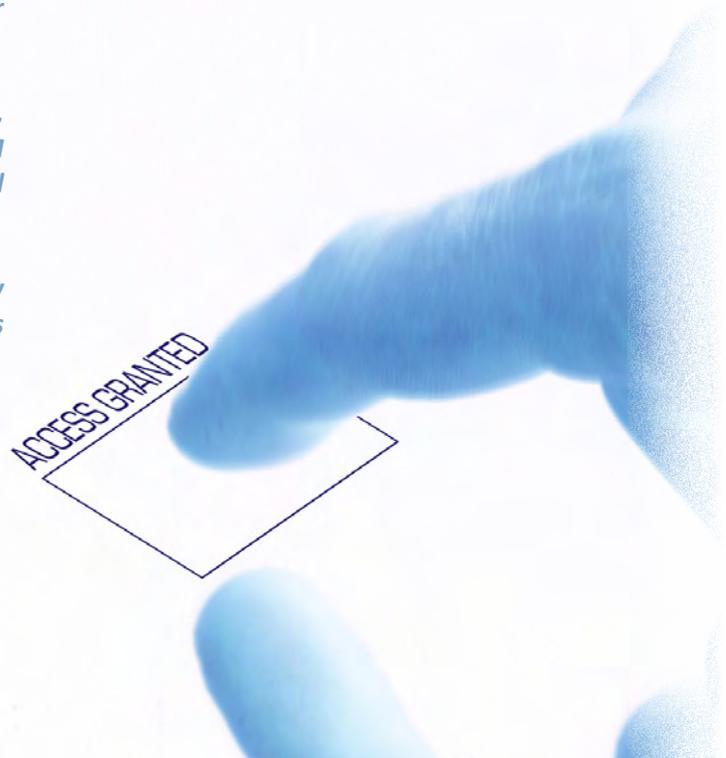

Lock / unlock doors

.....an excellent product for you

Stability is essential to gain confidence in a system, and this confidence is equally important to the installer and end-user alike.

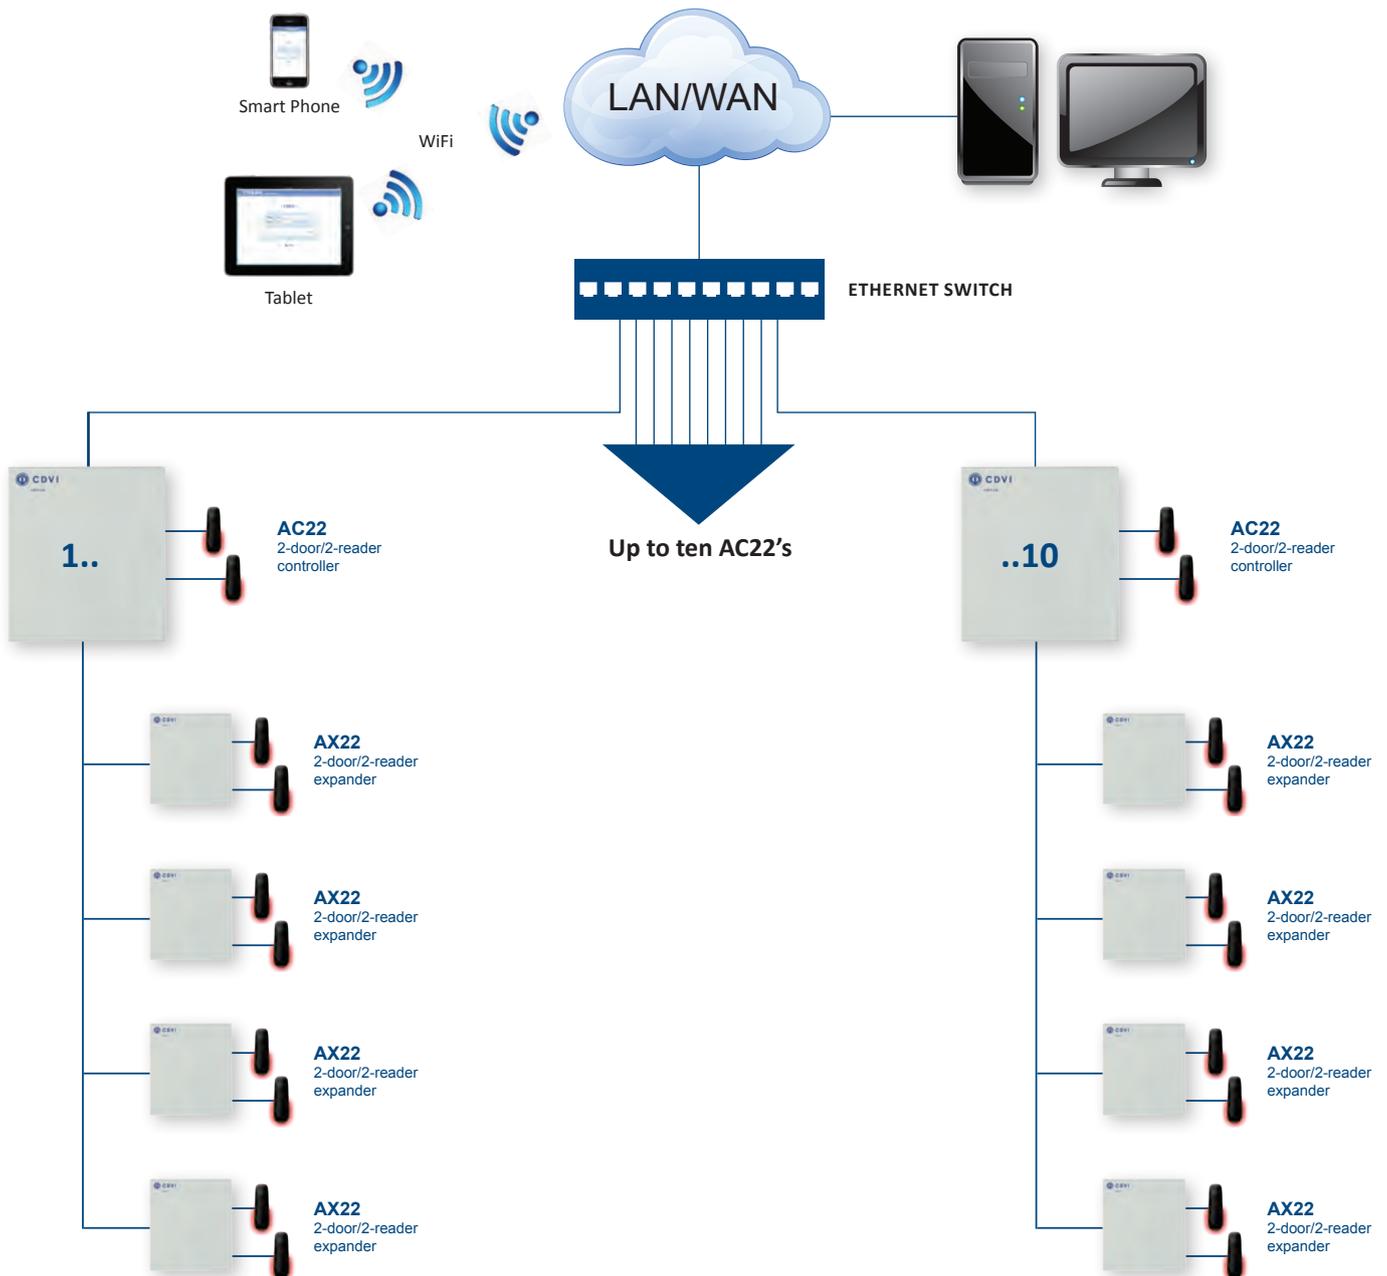

Whether the system is being monitored/controlled locally, remotely or as part of a maintenance package, ATRIUM provides the user with a fast and stable method to control access through one site or multiple sites.

The availability of critical information, and the ability to allow or deny access while on the move ensures that the user gets full use and value from ATRIUM.

Up to 100-Door Access Control System

Extremely simple and flexible wiring configuration
