

Lake Arrowhead was chemically treated for algae on June 5, 2015 by Nebraska Lake Management. The lake is safe to swim in and fish are ok to consume. At the time, they saw no visible signs of brittle naiad growing in the lake. We are in constant contact with Nebraska Lake Management to keep them updated and stay ahead of any excessive brittle naiad growth in the lake. If you suspect any naiad is actively growing contact Kim at the office at 402-533-2511 or send an email to lakelandne@gmail.com with pictures and location of naiad enclosed if possible.
