BIOPSY INSTRUCTIONS

A sample of the skin was removed to send for testing.

- Please keep the area covered with a Band-Aid and antibiotic ointment for 5-7 days after procedure. This will prevent infection and lessen the chance of a scar.
- If the bandage is clean and dry, change every other day to avoid irritation.
- You may allow the area to get wet, but do not apply hydrogen peroxide or alcohol to the area.
- If the area becomes red, swollen or painful contact the doctor immediately.

You will be contacted by our office within 14 days with the biopsy results
