Calculations National Debt

19,000,000,000,000 / 1,000,000 = 19,000,000

Pay off national debt $1,000,000 per year

19,000,000,000,000 /365 = 52 054 794 520 years

Pay off national debt $1,000,000 per day

19,000,000,000,000 /365,000,000 = 52 054 years

How many $100 bills make up national debt?

19,000,000,000,000 /100 = 190 000 000 000 ($100 dollar bills)

Dollar bill is 6.14 inches long

1.95 bills in each foot (12 inches)

5,280 feet to a mile

There are 10,296 bills in a mile

3,000 miles east to west coast X 10,296 bills = 30,888,000 $1 Bills

30,888,000 bills laid end to end once across the country

19,000,000,000,000 / 30,888,000 = 615,125 time across the country ($1.00 bills)

615,125 ($1 bills) divided by 100 ($100.00 bills) = 6,151 times across the country

3,075 round trips

Dollar bill is .0043 inches thick

12 / .0043 = 2, 790 bills stacked on top in a foot.

19,000,000,000,000 / 2, 790 = 6, 810, 035, 842 feet ($1.00 bills stacked to $19 Trillion)

6, 810, 035, 842 feet divided by 5,280 feet = 1 289 779 miles ($1.00 bills)

12,898 Miles high if $100 bills were stacked

Mount Everest highest mountain in the world   29,029 feet from sea level

Which is 5 .5 miles high.

12,898 / 5.5 = 2,345   If Mount Everest was stacked on itself 2,345 times it would equal the height of National debt with $100 bills stacked.

Moon to Earth = 225,623 miles

10,296 bills to the mile

225,623 x 10,296 = 2,323,014,408 bills end to end to get to the moon (one way trip)

19,000,000,000,000 / 2,323,014, 408 bills = 81,891 /2 (round trip) = 40,945 round trips.

If using $100 bills

40,945 /100 = 409 times around to the moon and back.

2014 Gross National Income in the USA $17,601,119,000,000 (Trillion)

If every penny earned by every single American was confiscated and used to pay of the debt, $ 1 398 881 000 000 would still remain.

When Obama took office the National Debt was =10.6 trillion.

When he leaves office it will be 20 trillion

That is an increase of $9, 400, 000, 000, 000

60 minutes in an hour x 24 hours = 1,440 minutes a day

1,440 minutes a day x 365 days = 525,600 minutes in a year

9,400,000,000,000 / 525,600 = $17 884 322 spent per minute if this was done in a year. But it is his increase over 8 years. So we divide 17,884,322 by 8 years

This means that Obama, at the end of his 8 years will have increased the National Debt at the rate of $2 235 540.00 every minute.
