Properly designed row cleaners provide a very desirable type of tillage. With row cleaner teeth continuously engage the soil to the shallow depth of 1" to 1 1/2". By scarifying the soil's surface layer, it makes it easier for the seed openers to open a well-defined "V" without furrowing out or causing slabbing or fleaking. Eliminating furrows is the key to preventing erosion in the row on slopes and the ponding of water over the row in level areas. Martin Row Cleaners come in two basic types: **rigid** and **floating**.

Hydraulic Frame Weight Distribution System

Can be used with Frame Mounted Opener
Fits 1770 12,16 AND 24 Row/ 1790-95

Includes...

- In-Cab Control Box with harness
- Bolt on brackets
