

Learning and Drawing  
Shapes  
with  
Katie and Karl Wallaroo

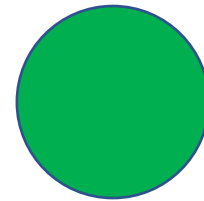

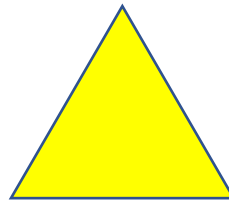

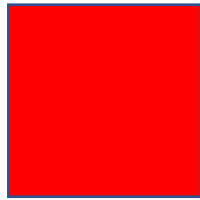

**Katie**

**Ok Girls and Boy  
let look at  
the different Shapes**

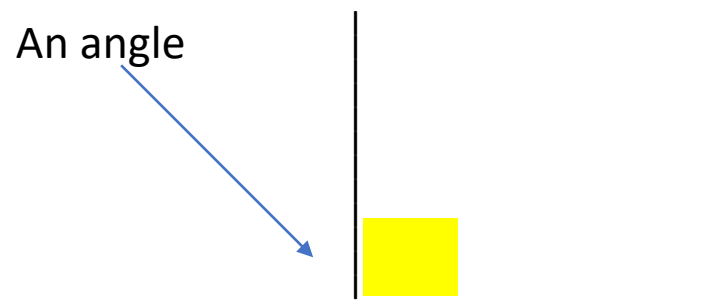

**Karl**

Line is a set of infinite points which extend indefinitely in both directions with no curves and the end do not meet.

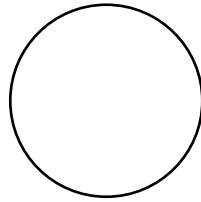

---

The space between two intersecting lines or surfaces at or close where they meet.

# Learning and Drawing Shapes

Draw several circles in the line below

---

---

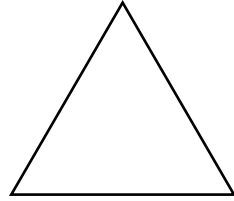

A circle is a line that is curved so that its ends meet and every point on the line is the same distance from the center.

**Things shaped  
like a Circle**

# Learning and Drawing Shapes

Draw several triangles in the line below

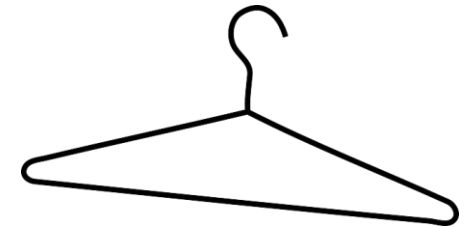

---

---

A circle is a flat geometric figure that has three sides and three angles

**Things shaped  
like a Triangle**

# Learning and Drawing Shapes

Draw several squares in the line below

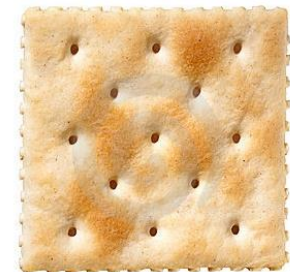

---

---

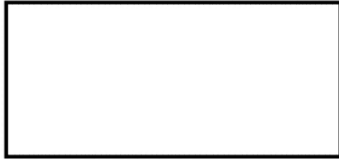

A square is a plane figure with four equal straight sides and four right angles.

**Things shaped  
like a Square**

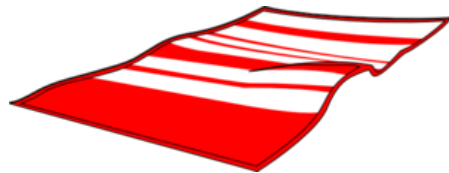

# Learning and Drawing Shapes

Draw several rectangles in the line below

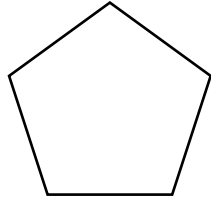

A rectangle is a shape with four sides and four corners. The corners are all right angles. It follows that the lengths of the pairs of sides opposite each other must be equal

**Things shaped  
like a Rectangle**

# Learning and Drawing Shapes

Draw several Pentagons in the line below

---

---

A pentagon is a flat geometric figure having five angles and five sides

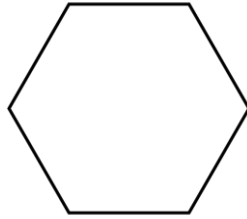

**Things shaped  
like a Pentagon**

# Learning and Drawing Shapes

Draw several hexagon in the line below

---

---

A hexagon is a plane figure with six straight sides and angles.

**Things shaped  
like a Hexagon**

# Learning and Drawing Shapes

Draw several heptagons in the line below

---

---

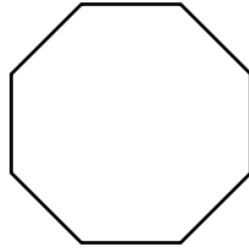

A heptagon is a closed geometric figure having seven angles and seven sides

**Things shaped  
like a Heptagon**

# Learning and Drawing Shapes

Draw several octagons in the line below

---

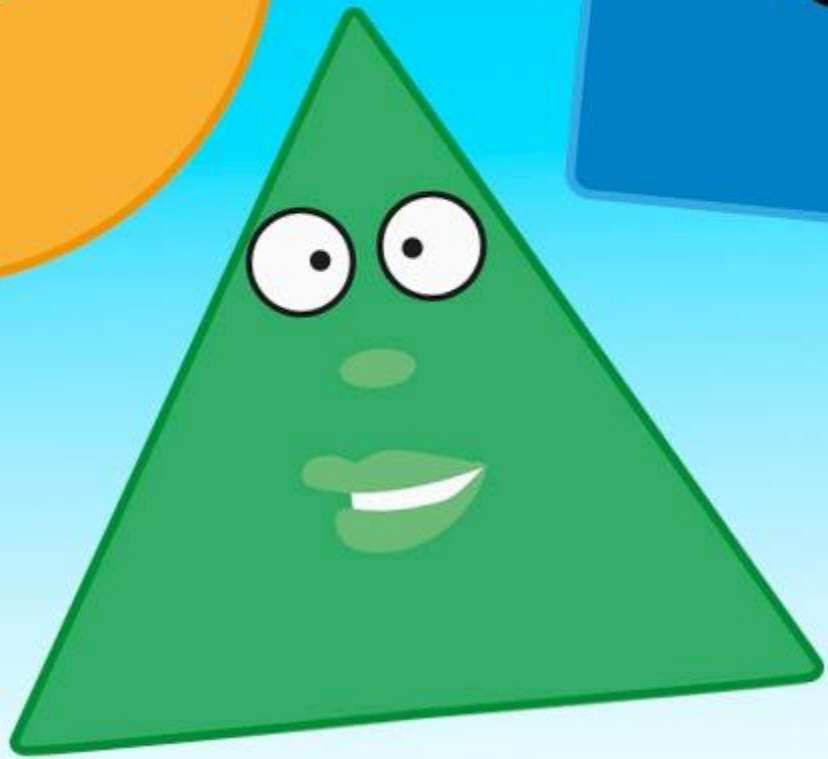

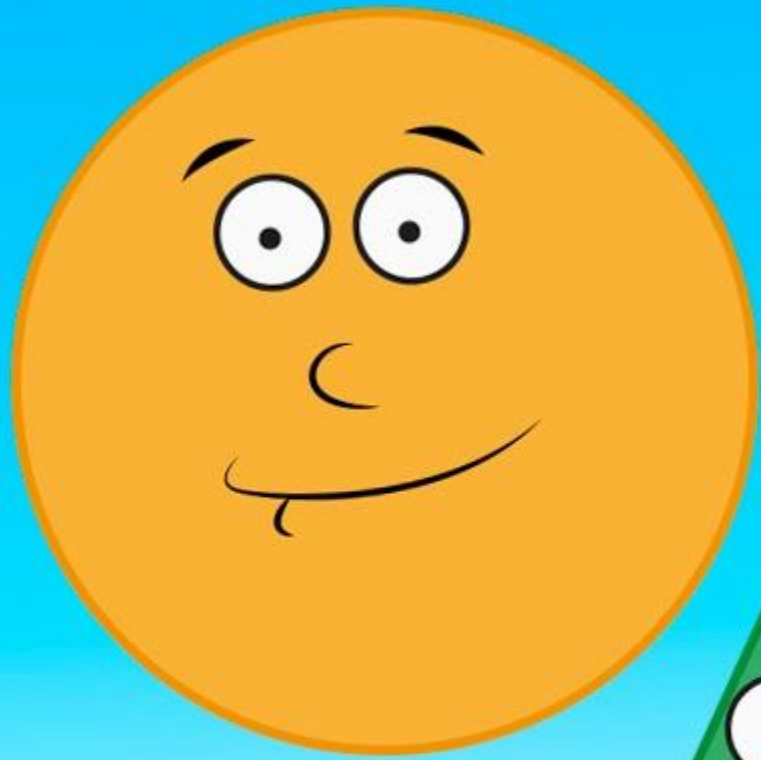

---

An octagon is a plane figure with eight straight sides and eight angles

**Things shaped  
like an Octagon**
